  - Teaching/Training environment
  - Collaborative data visualization/inspection
  - Telepresence system

VR telepresence system [Dijkstra-Soudarissanane19]

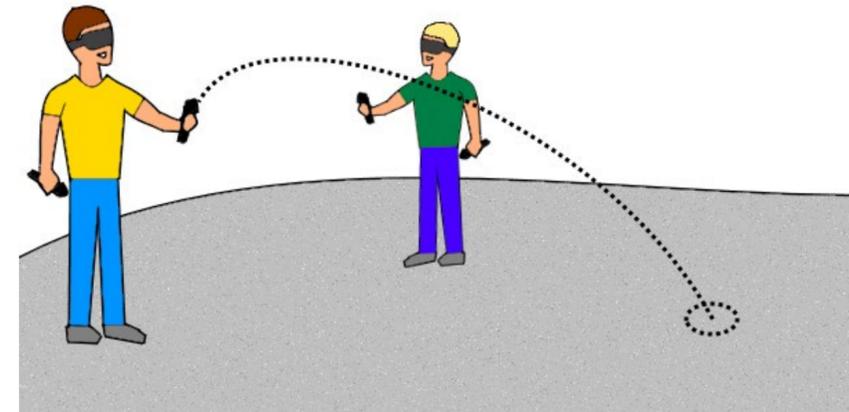

# Motivation - Teleport

- Teleportation popular for locomotion
  - Produces least cybersickness, larger distances

# Motivation - Teleport

- Teleportation popular for locomotion
  - Produces least cybersickness, larger distances
- Issue: No visual feedback for observers

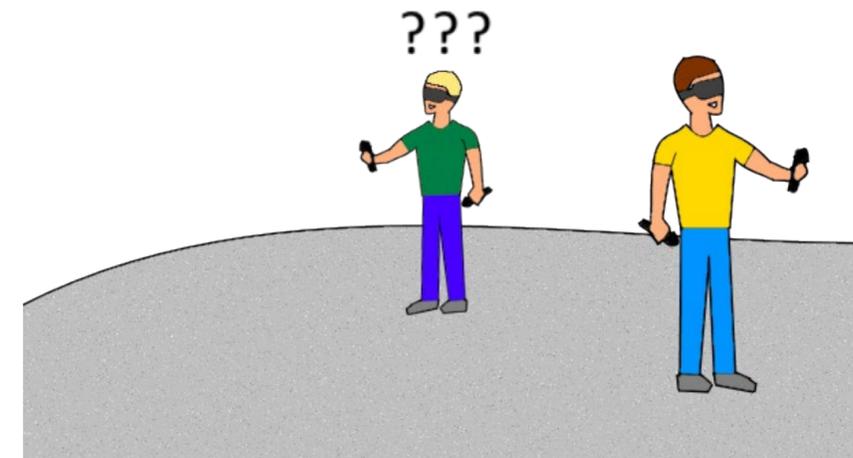

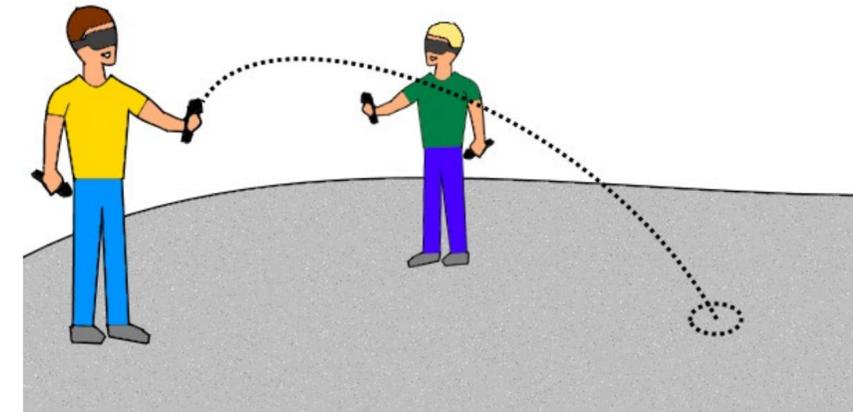

# Motivation - Teleport

- Teleportation popular for locomotion
  - Produces least cybersickness, larger distances
- Issue: No visual feedback for observers

- May lead to confusion, loss of presence

# Related Work

- Scarce research on observer's perception of teleport locomotion

- Scarce research on observer's perception of teleport locomotion
  - [Thanyadit20] presented design requirements, did pilot study (n=5) with substituted visualizations

# Related Work

- Scarce research on observer's perception of teleport locomotion
  - [Thanyadit20] presented design requirements, did pilot study (n=5) with substituted visualizations
  - [Freiwald21/22] proposed „smart avatars“ for teleport visualization.  
Evaluated spatial awareness, attractiveness, pragmatic/hedonic quality scores.  
Novel, continuous visualizations performed best

- Scarce research on observer's perception of teleport locomotion
  - [Thanyadit20] presented design requirements, did pilot study (n=5) with substituted visualizations
  - [Freiwald21/22] proposed „smart avatars“ for teleport visualization.  
Evaluated spatial awareness, attractiveness, pragmatic/hedonic quality scores.  
Novel, continuous visualizations performed best
    - Single teleportation scenario, no presence

# Our Contributions

- Implemented 5 teleport visualizations

# Our Contributions

- Implemented 5 teleport visualizations
- Large user study (n=52)

# Our Contributions

- Implemented 5 teleport visualizations
- Large user study (n=52)
- Comprehensive evaluation

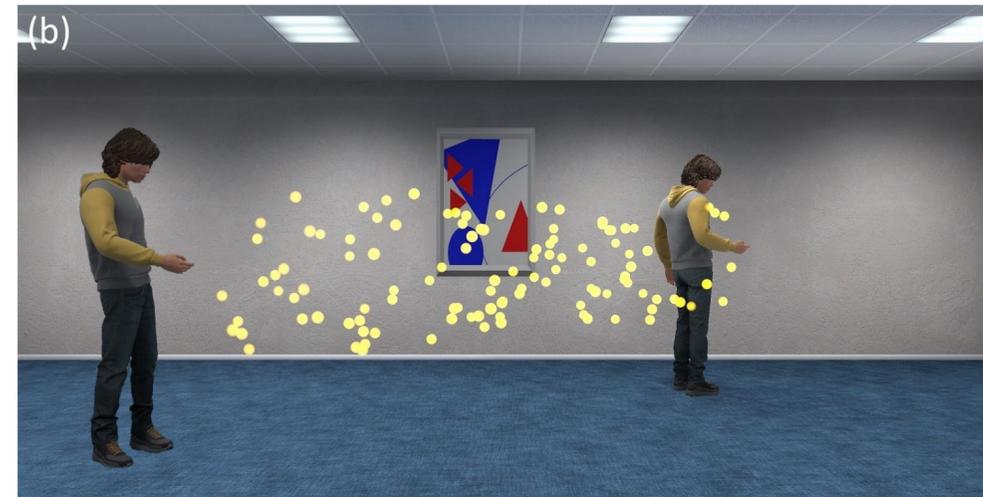

# Our Contributions

- Implemented 5 teleport visualizations
- Large user study (n=52)
- Comprehensive evaluation
- Visualization guidelines

# Visualizations

a) Standard/delayed teleport (P&CS/P&C)

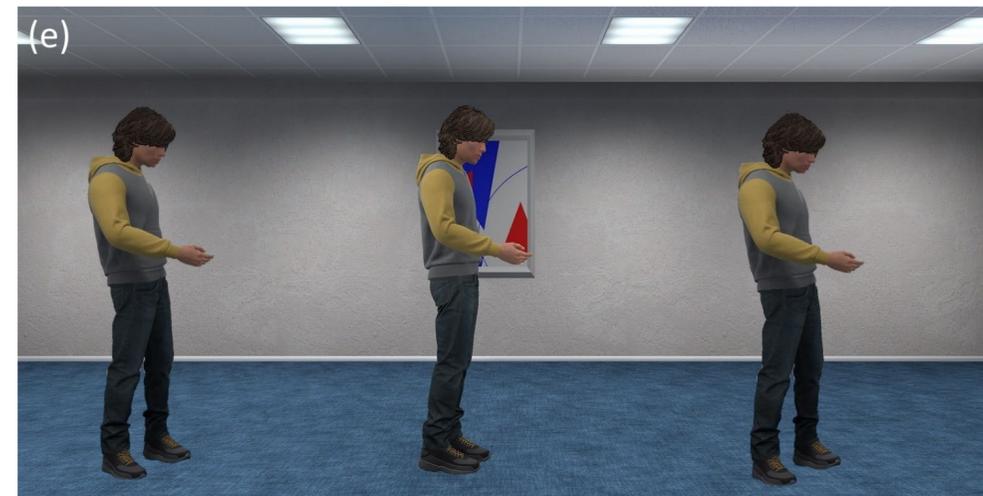

b) Particle trace (PTrace)

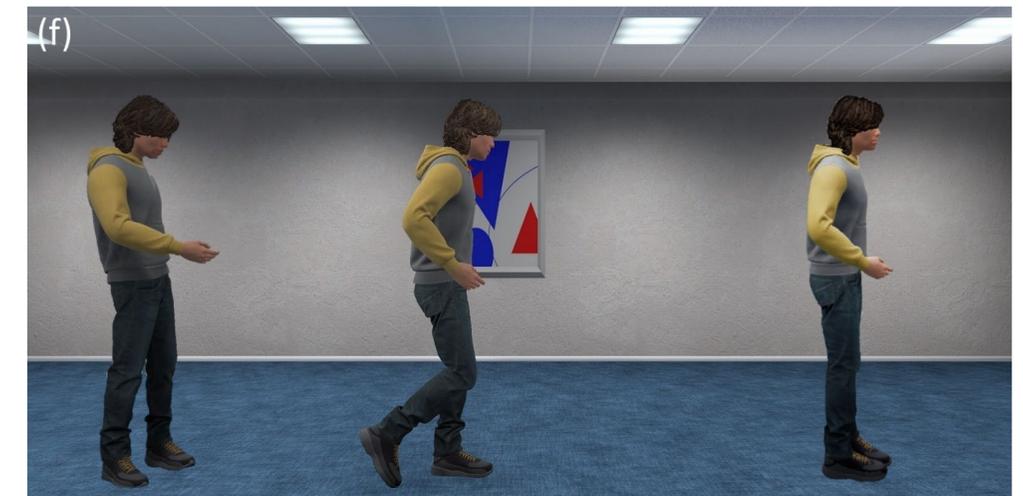

c) Beam

d) Portal

e) Dash

f) Walking animation (Walk)

[Fischer, Jochens et al. SUI23]

# Study Design and Setup

- Focus on near-field teleportation

# Study Design and Setup

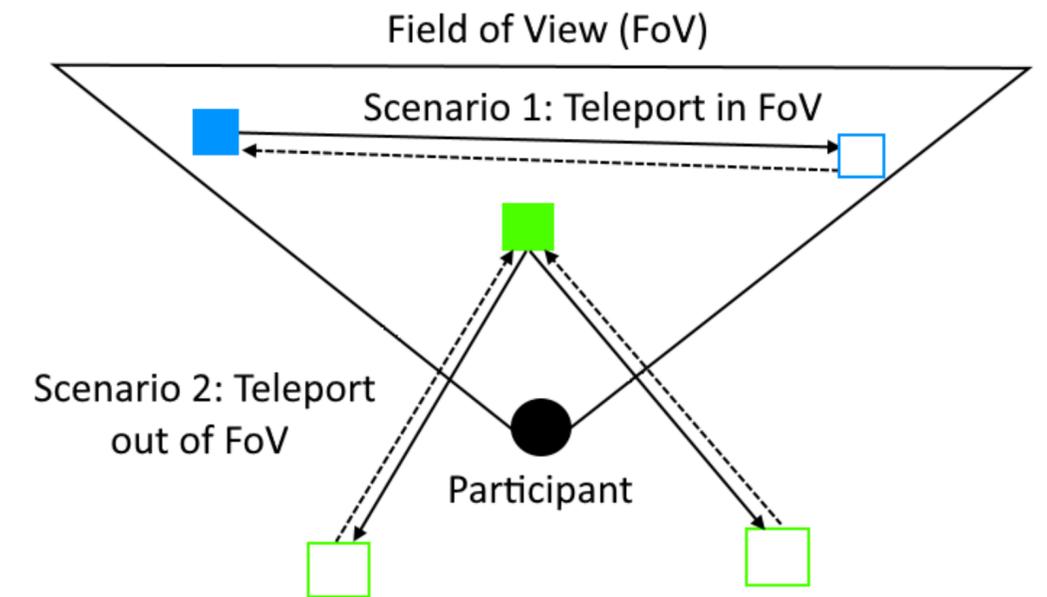

- Focus on near-field teleportation
- Minimalistic room, single observer, single pre-recorded teleporting avatar

# Study Design and Setup

- Focus on near-field teleportation
- Minimalistic room, single observer, single pre-recorded teleporting avatar
- Participants: 52 (76.9 % men, 23.1 % women)

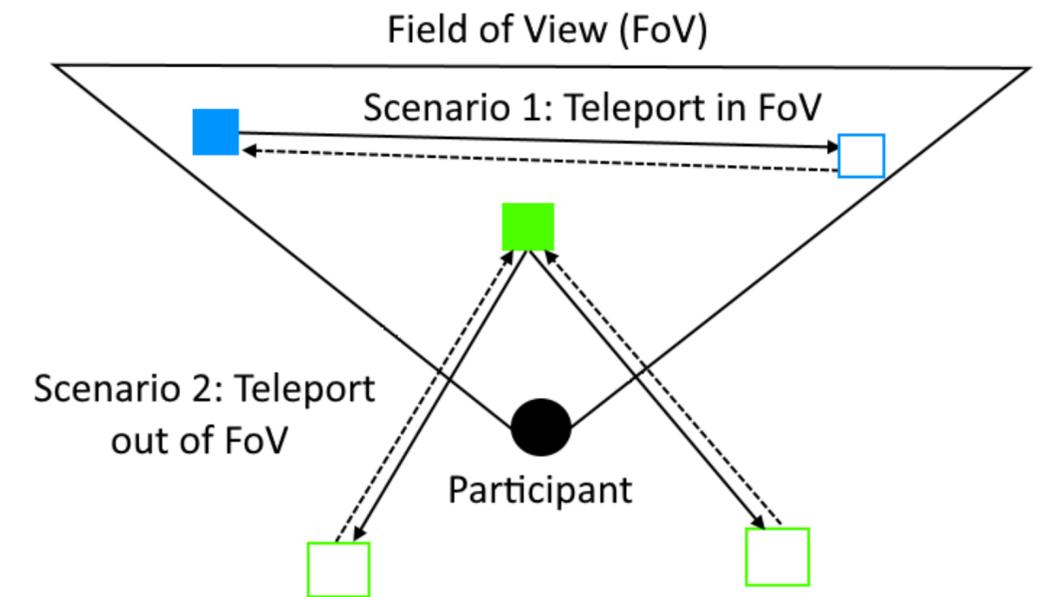

# Study Design and Setup

- Focus on near-field teleportation
- Minimalistic room, single observer, single pre-recorded teleporting avatar
- Participants: 52 (76.9 % men, 23.1 % women)
- Conditions: 2 (FOV) x 2 (speed) x 7 (visualizations)

# Study Design and Setup

- Focus on near-field teleportation
- Minimalistic room, single observer, single pre-recorded teleporting avatar
- Participants: 52 (76.9 % men, 23.1 % women)
- Conditions: 2 (FOV) x 2 (speed) x 7 (visualizations)
- Task: Observe and track avatar

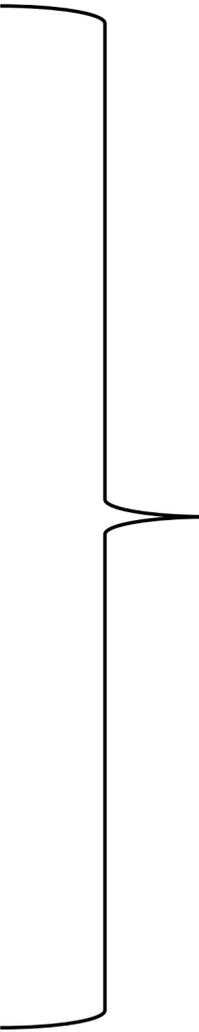

# Measurements

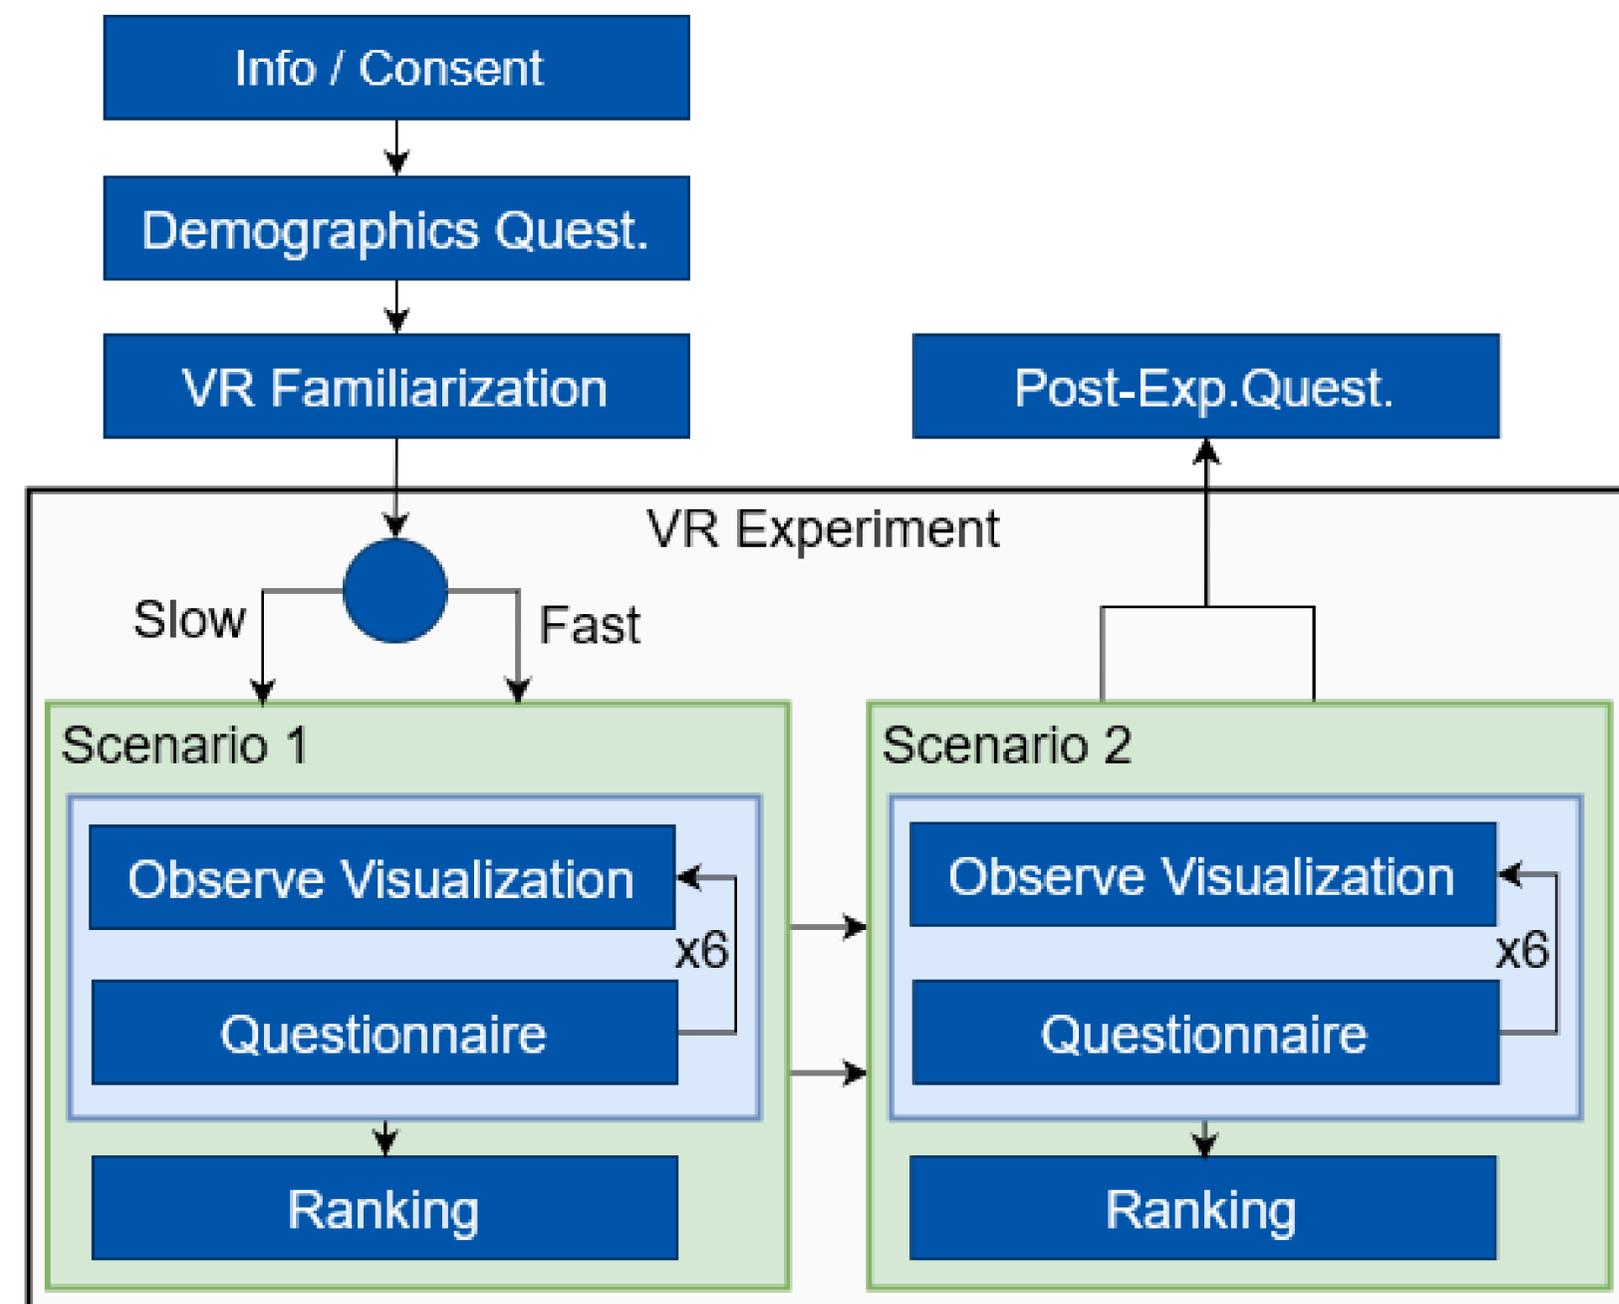

- Social/spatial presence
- Spatial awareness  
(target anticipation, trackability)
- Confusion (plausibility, intuitiveness)
- User preference
- Speed scalability

# Measurements

- Social/spatial presence
- Spatial awareness  
(target anticipation, trackability)
- Confusion (plausibility, intuitiveness)
- User preference
- Speed scalability

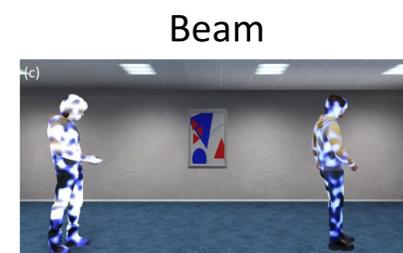

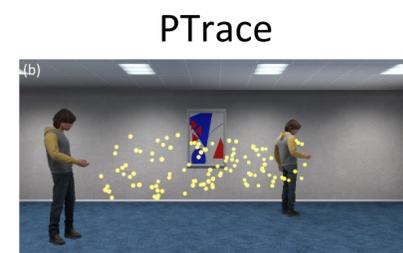

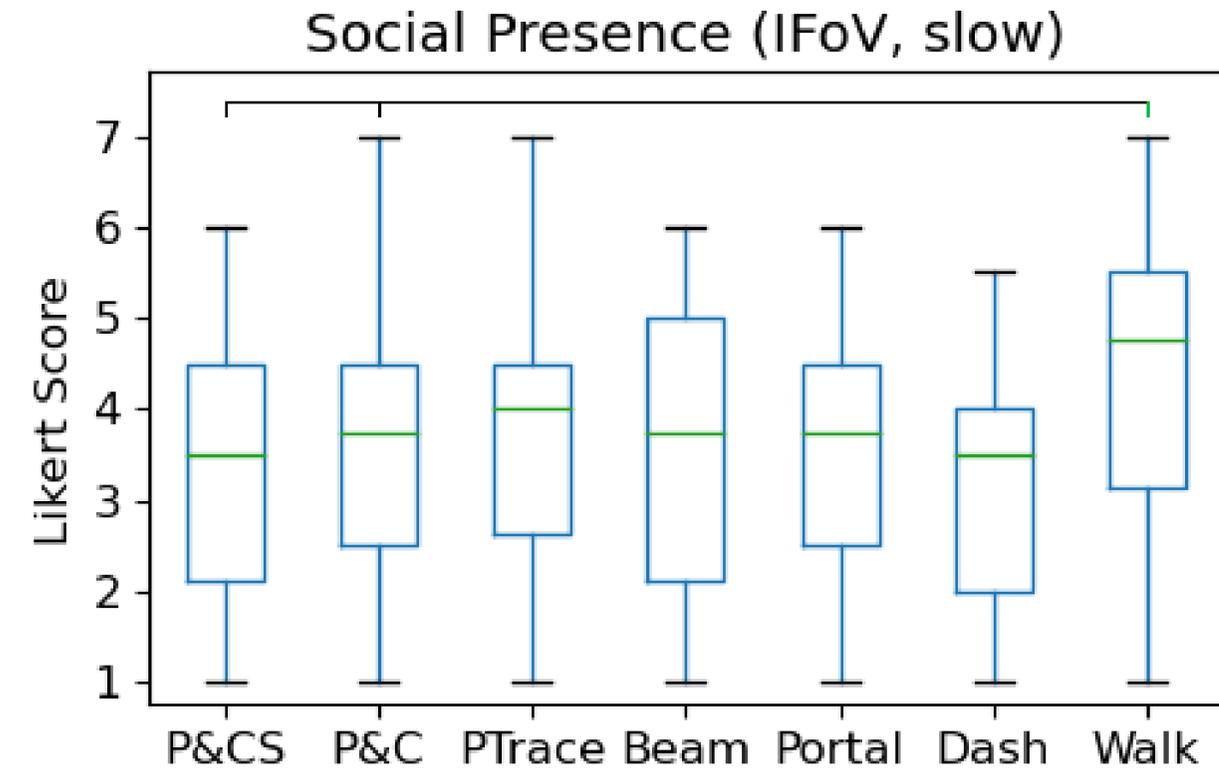

Questionnaires +  
eye- and controller tracking

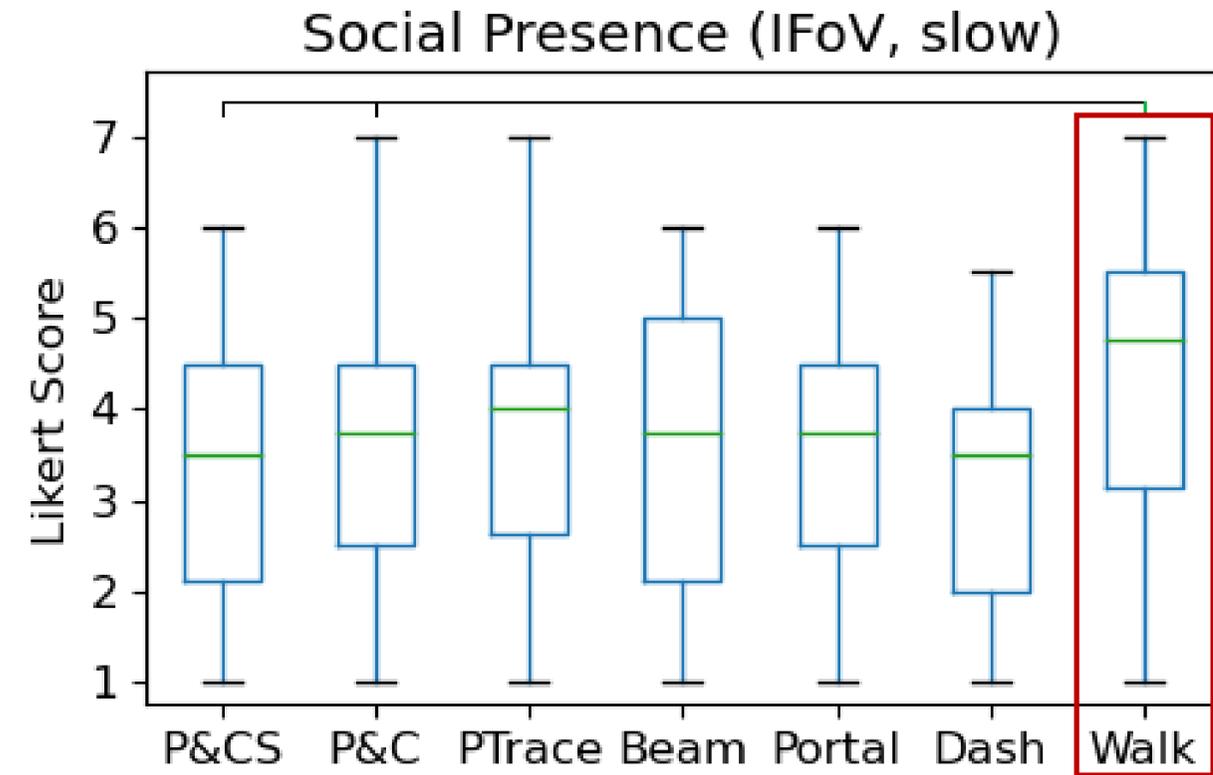

# Results & Discussion

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

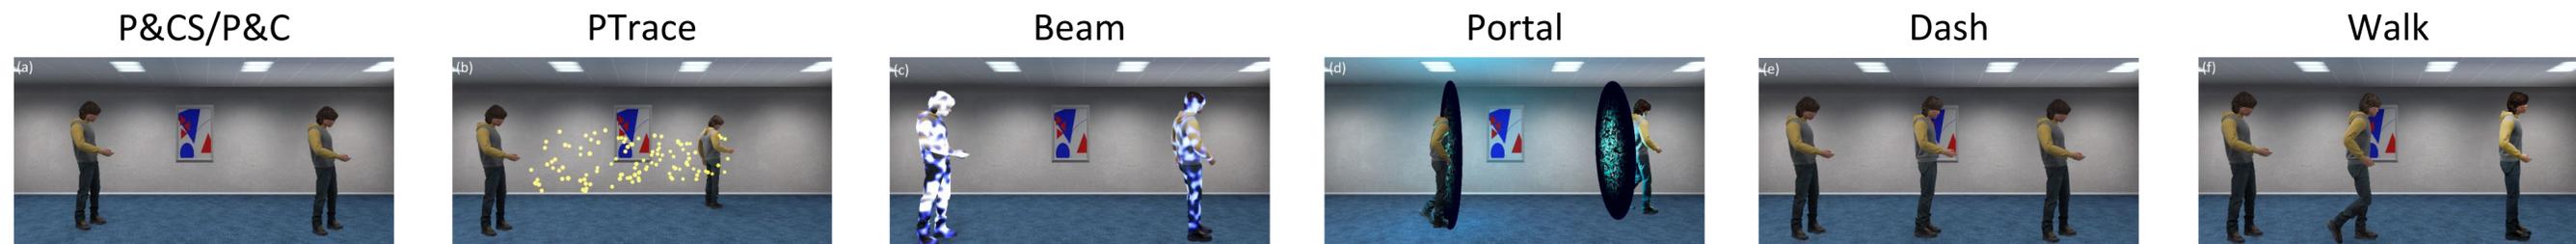

# Results & Discussion

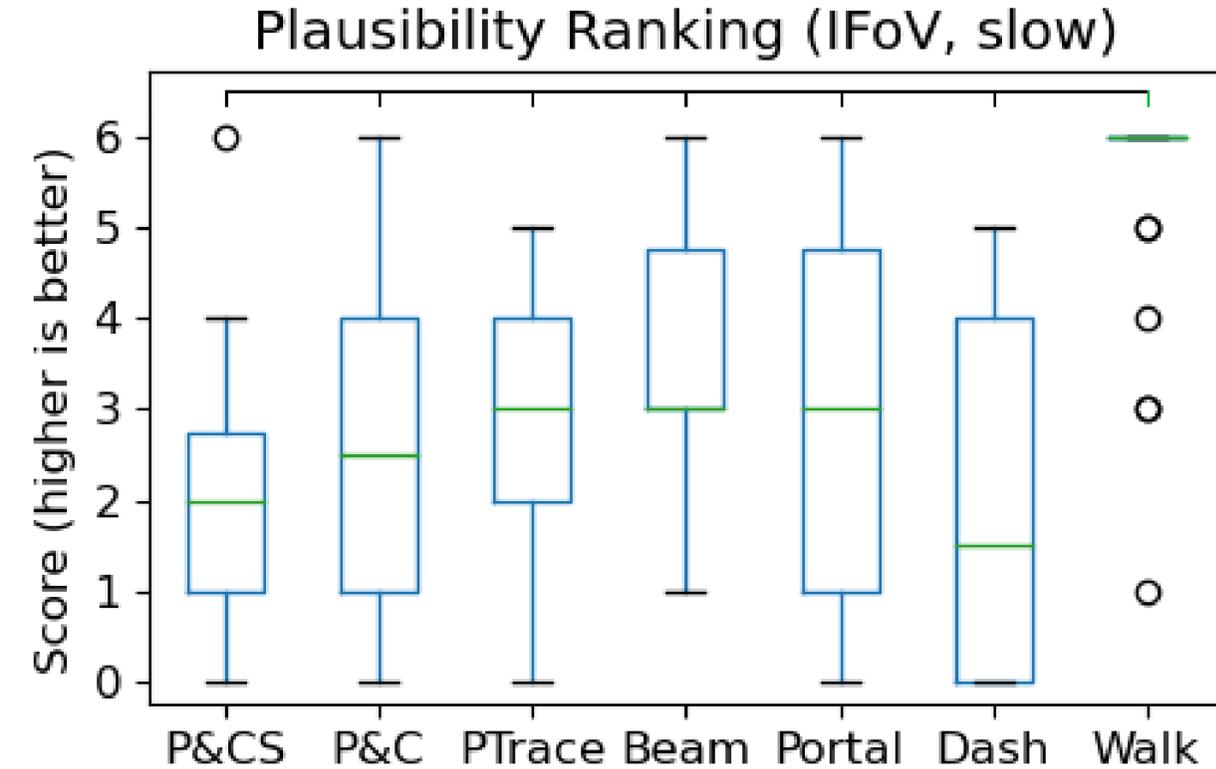

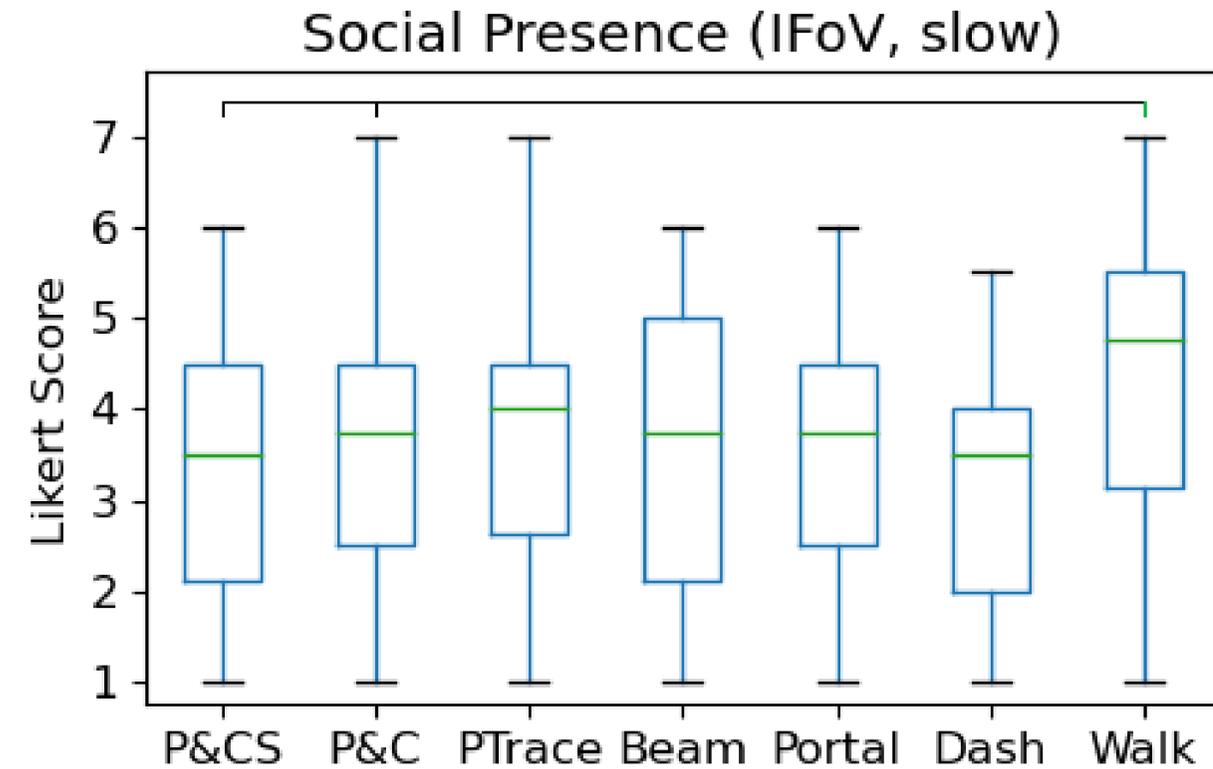

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

Walking has highest presence

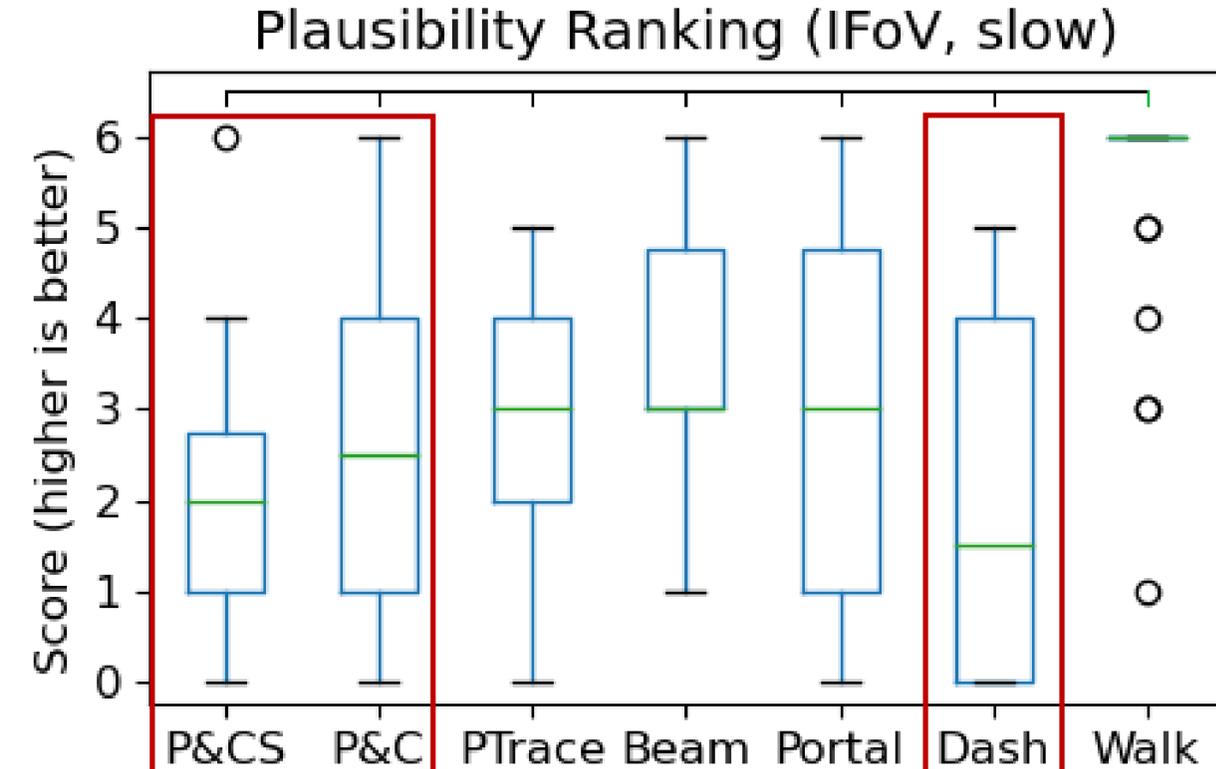

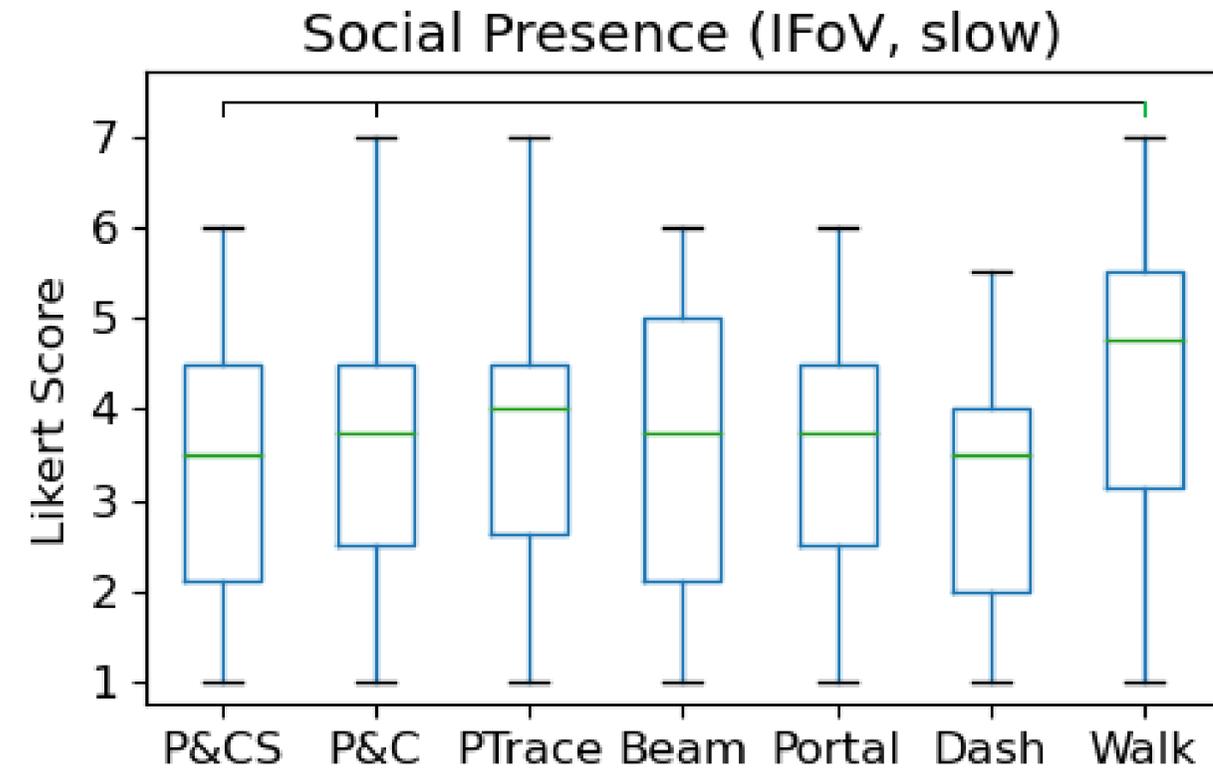

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

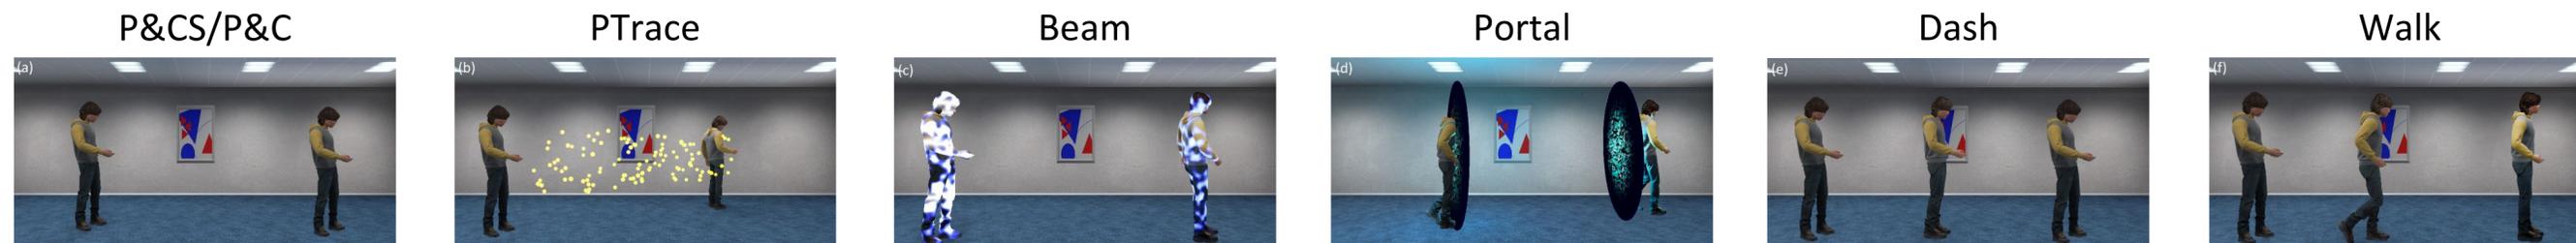

Walking has highest presence

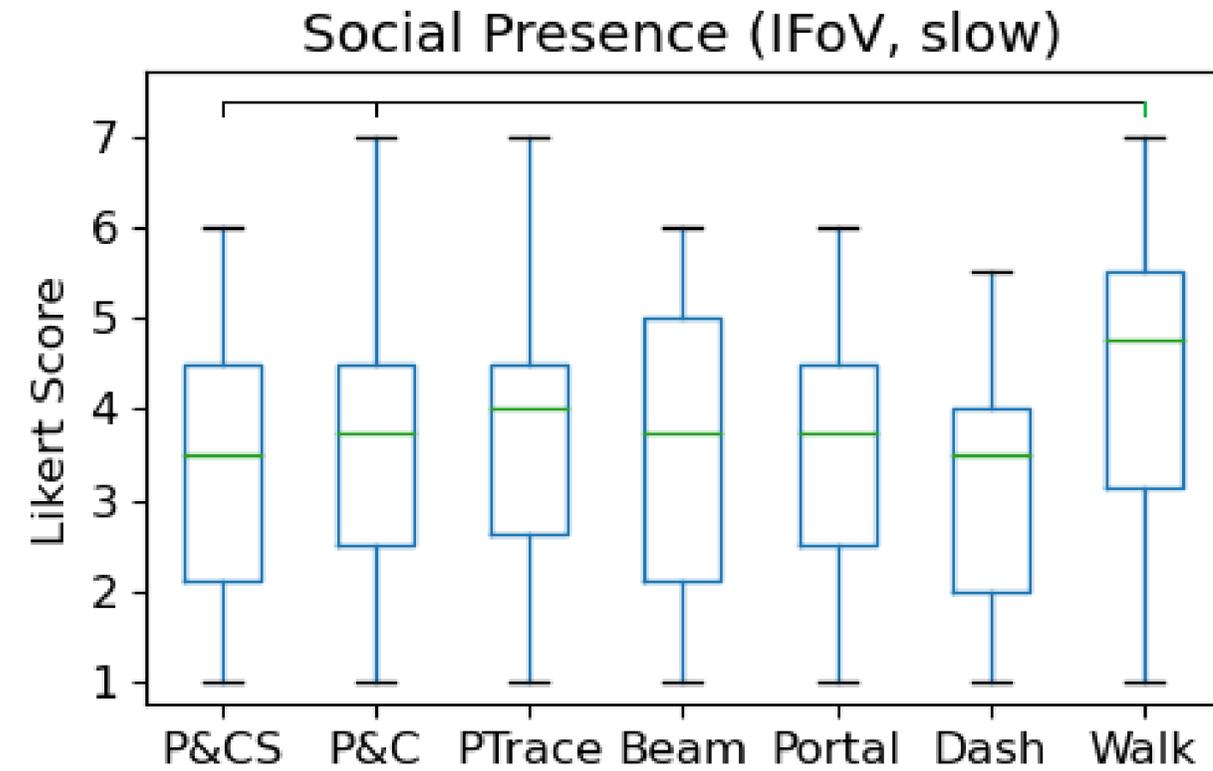

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

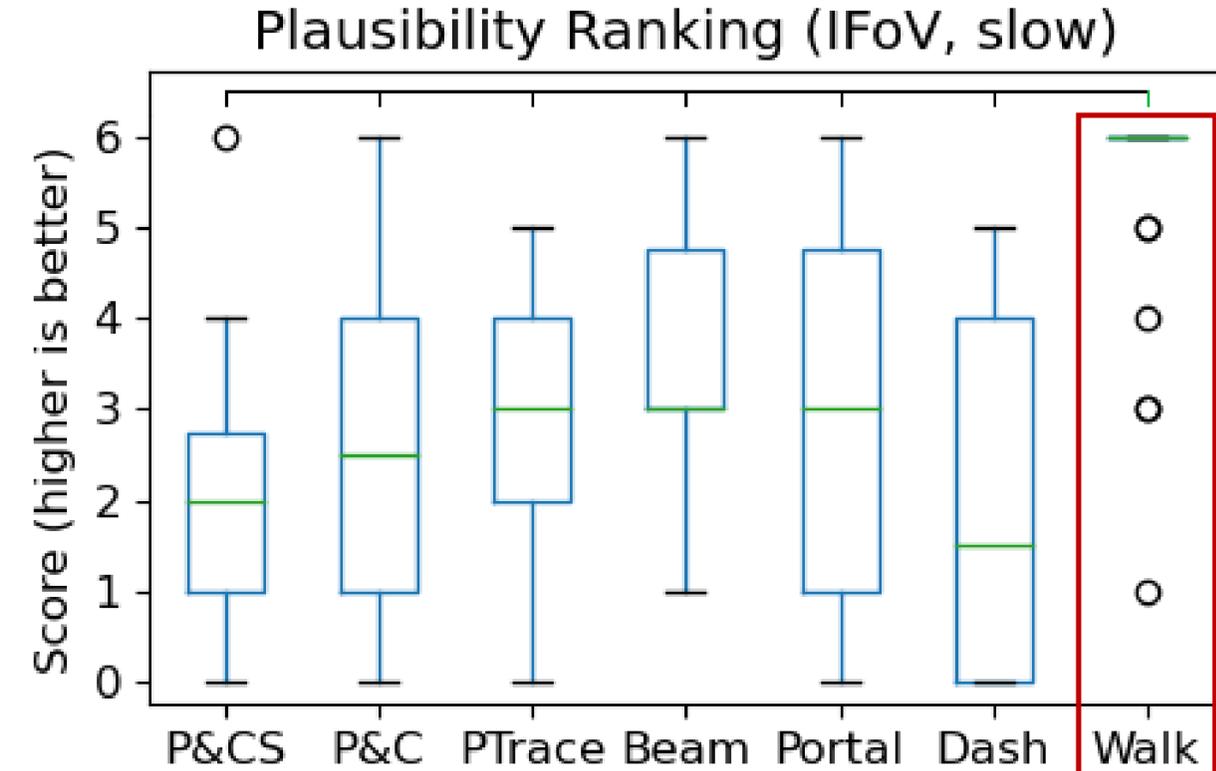

Walking has highest presence

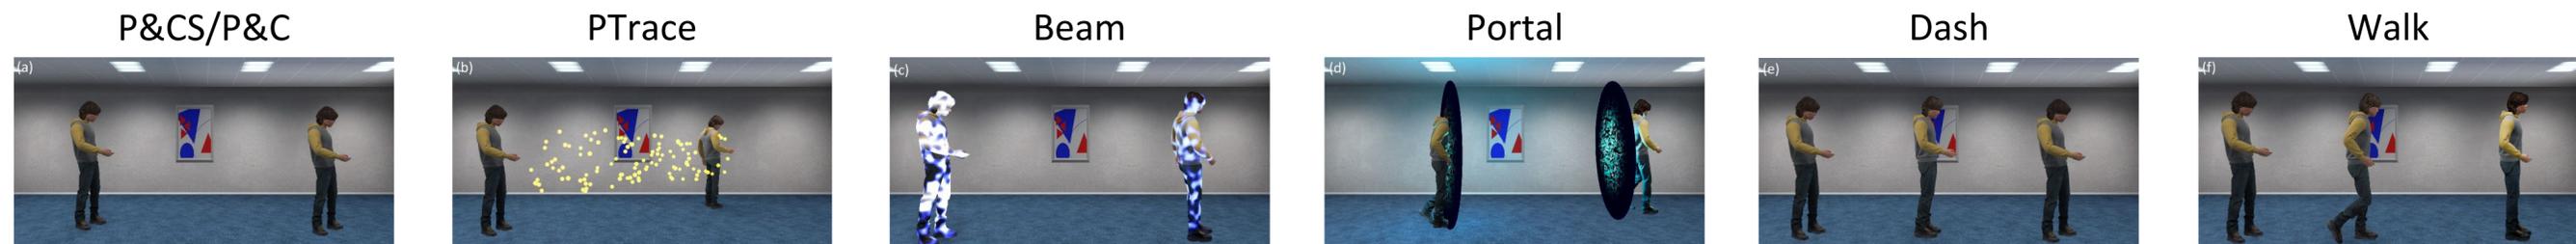

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

Walking has highest presence

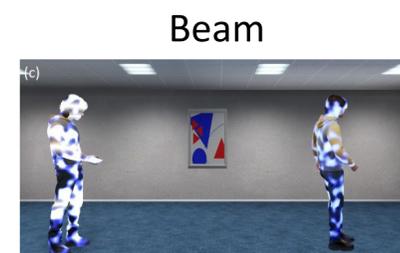

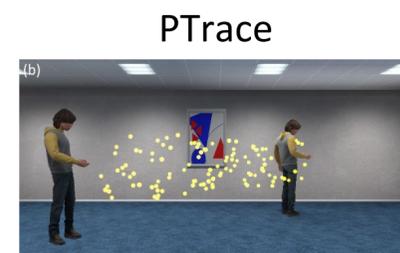

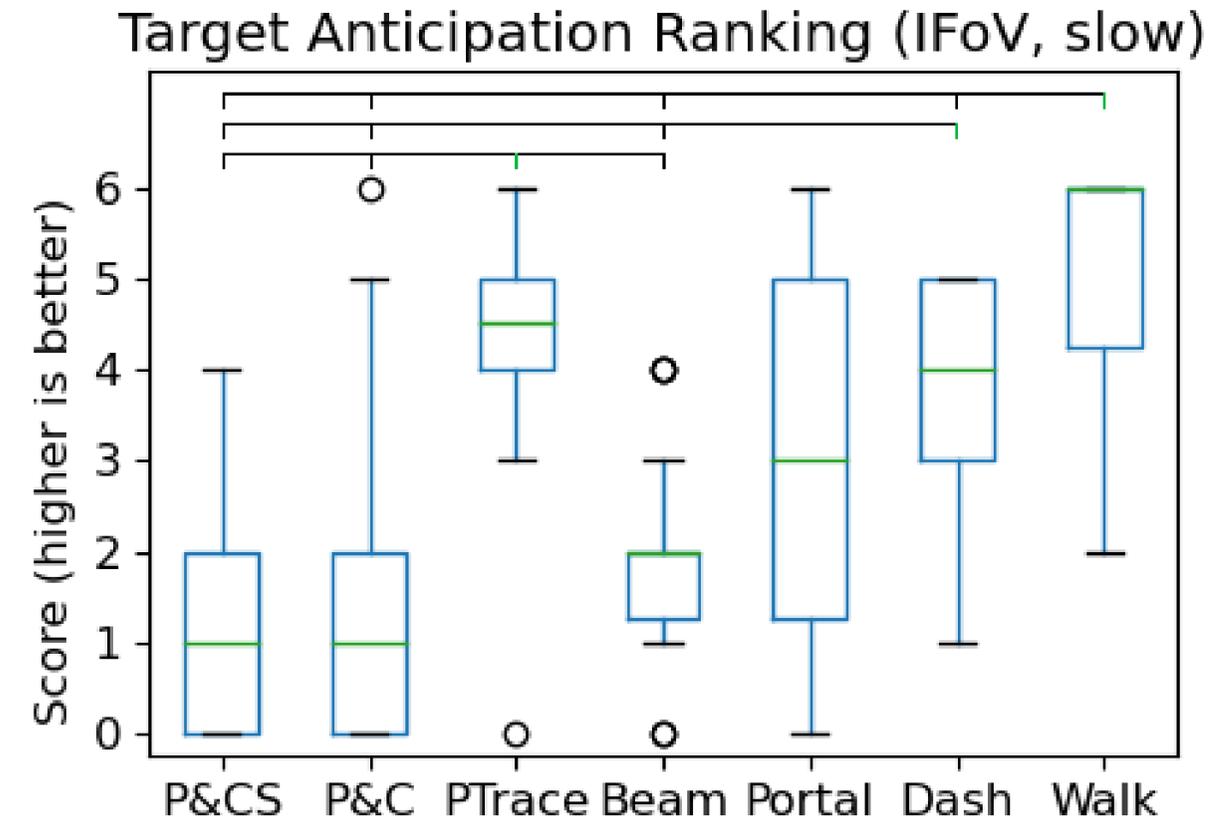

Walking reduces confusion the most

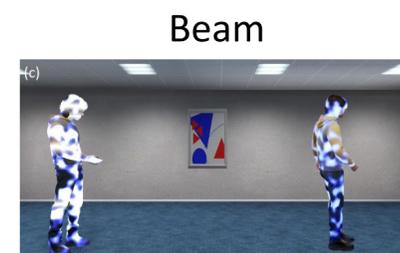

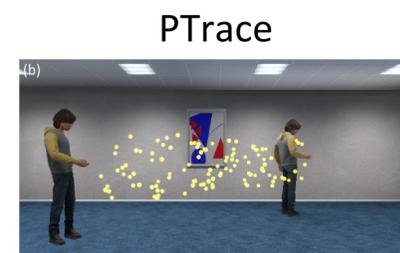

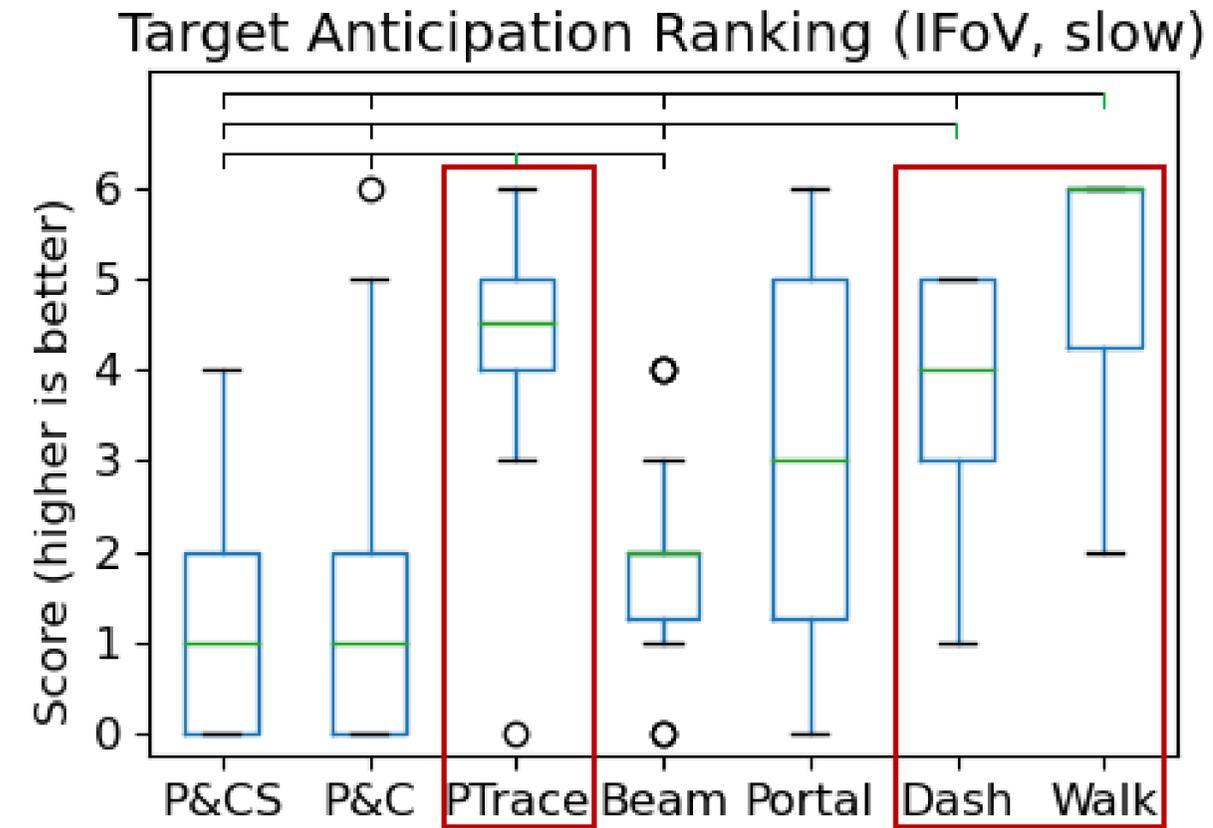

# Results & Discussion

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

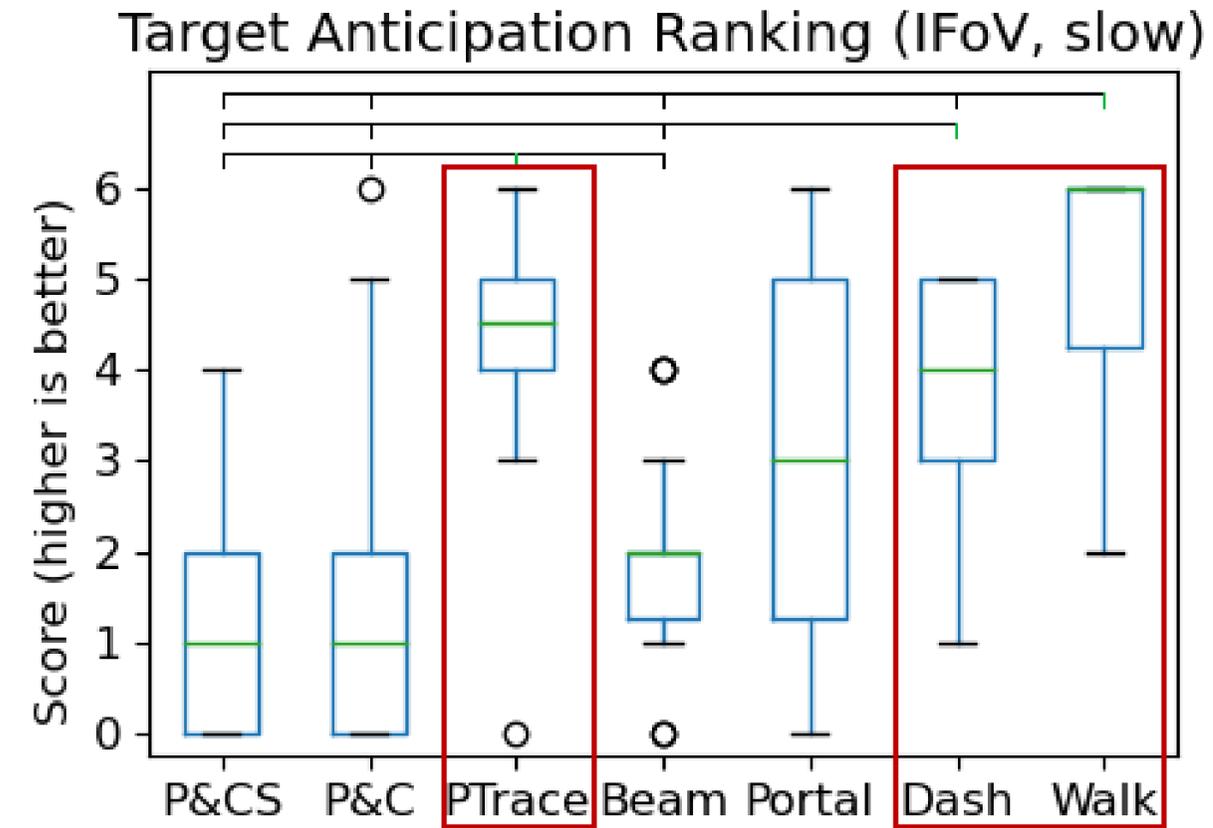

# Results & Discussion

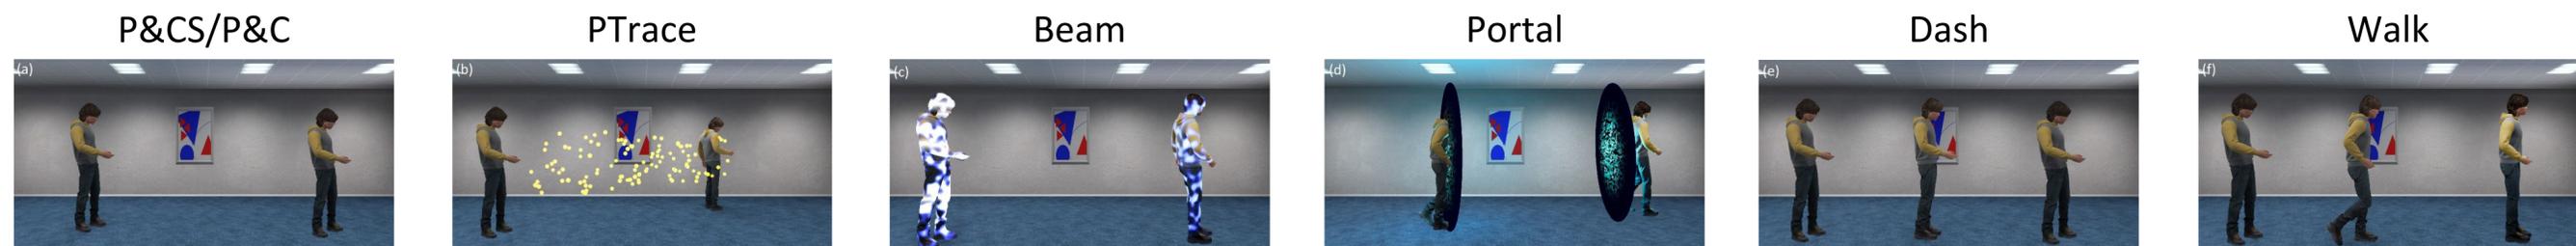

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

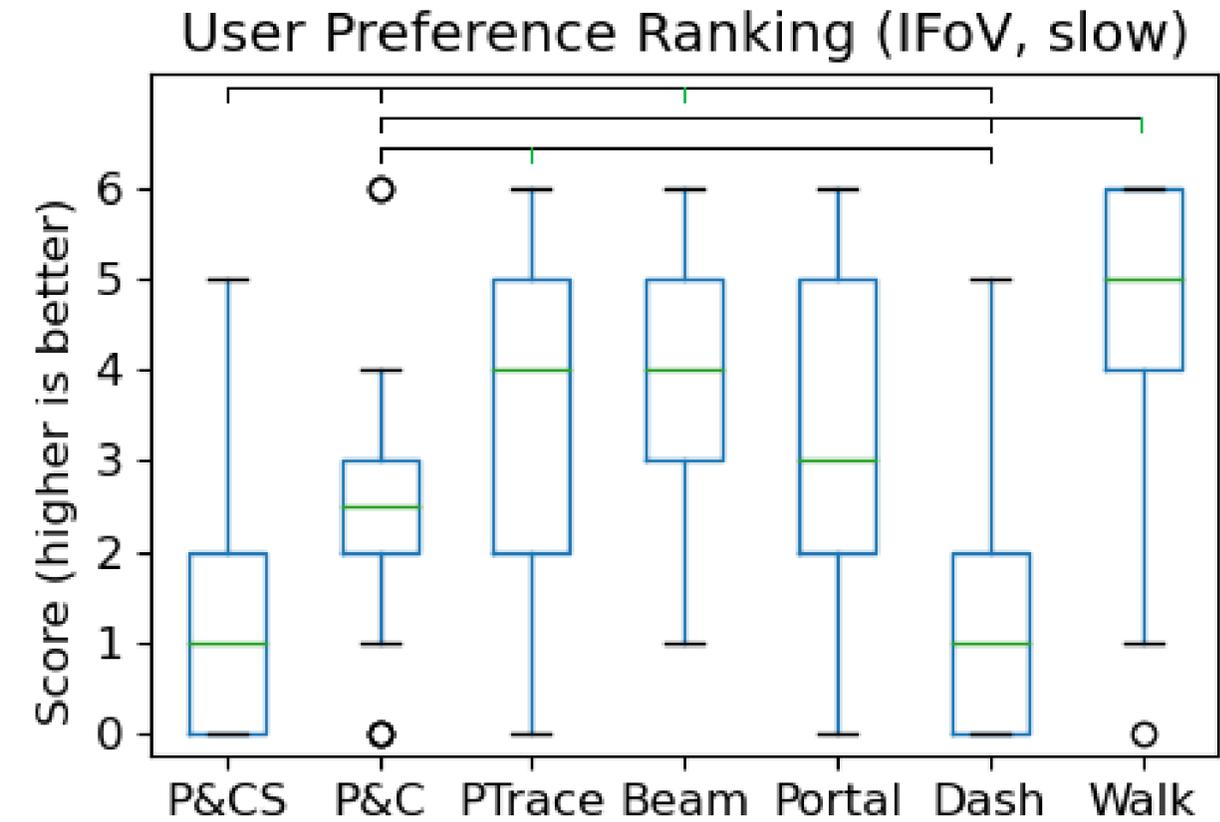

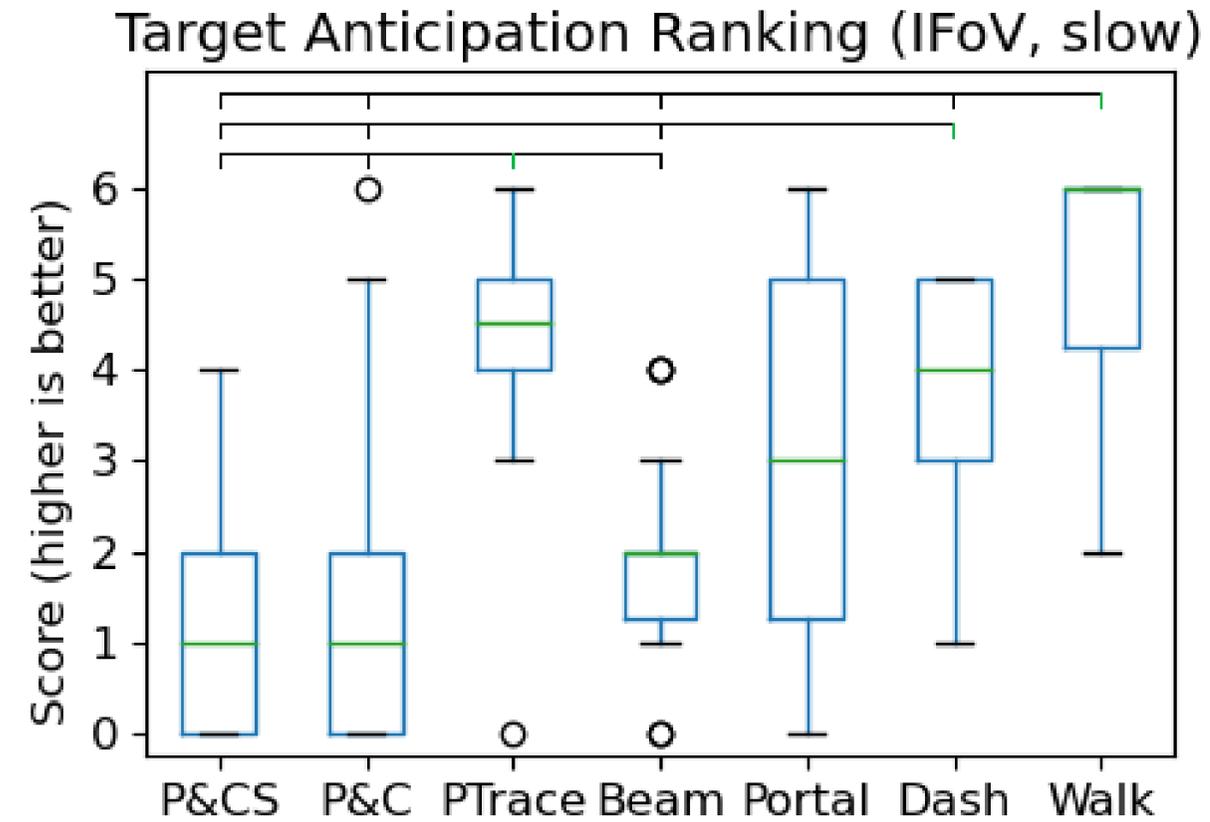

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

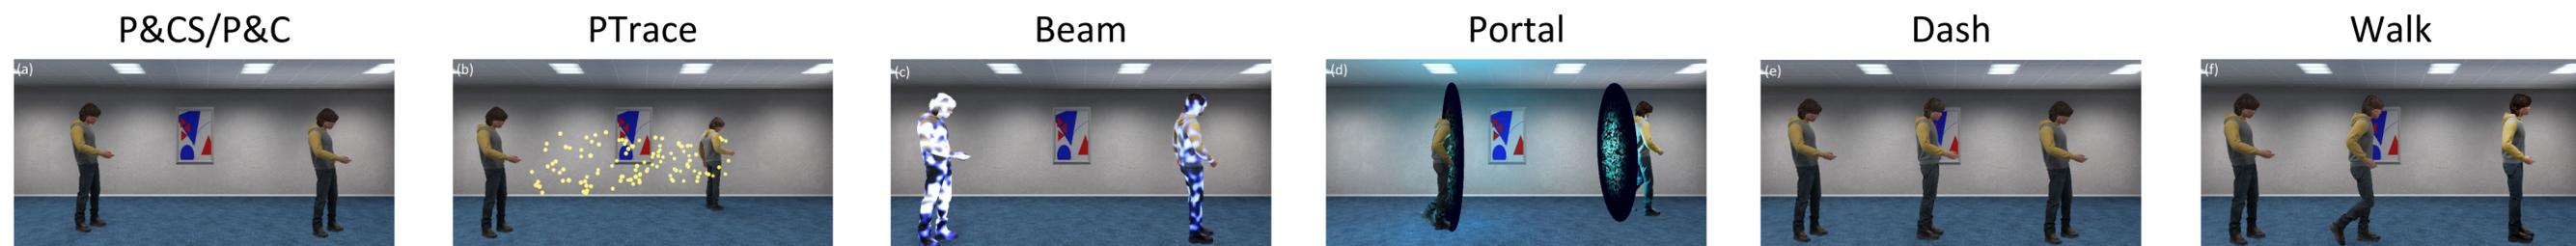

Continuous visualizations have highest spatial awareness, backed by tracking results

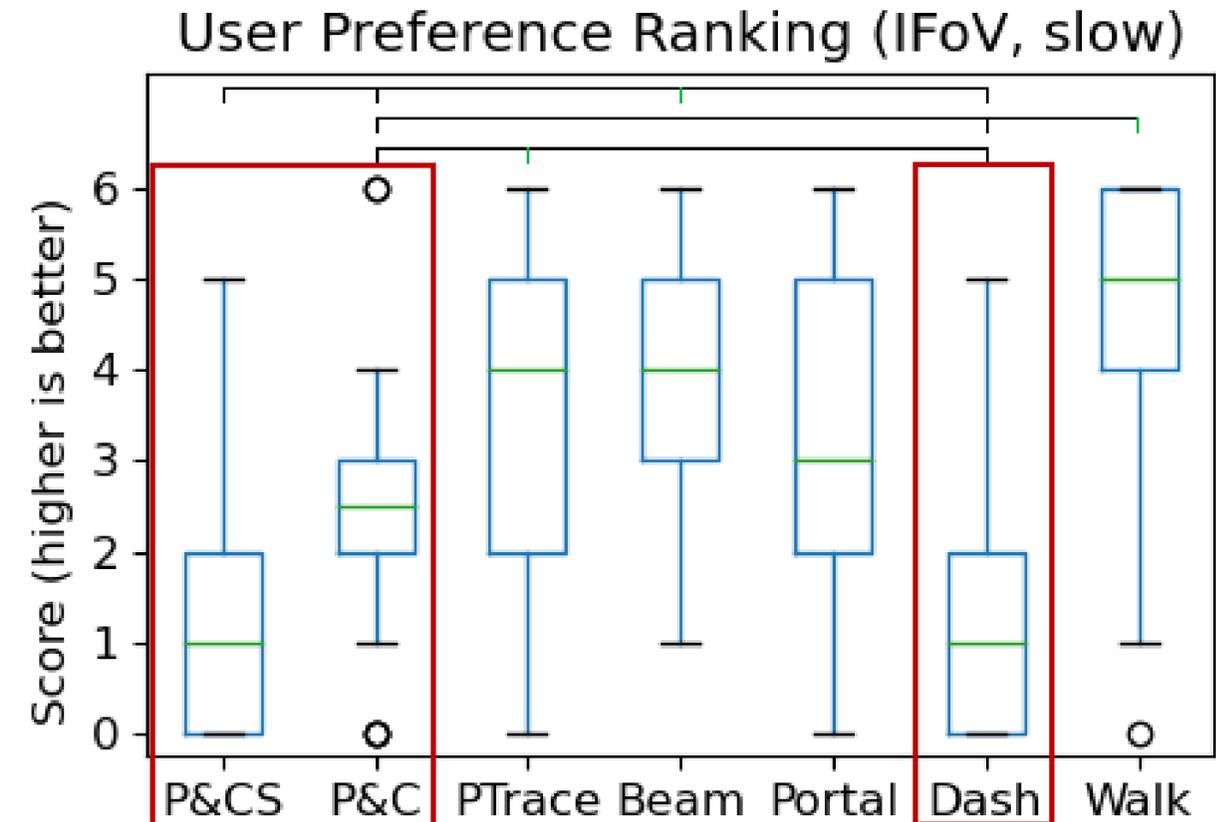

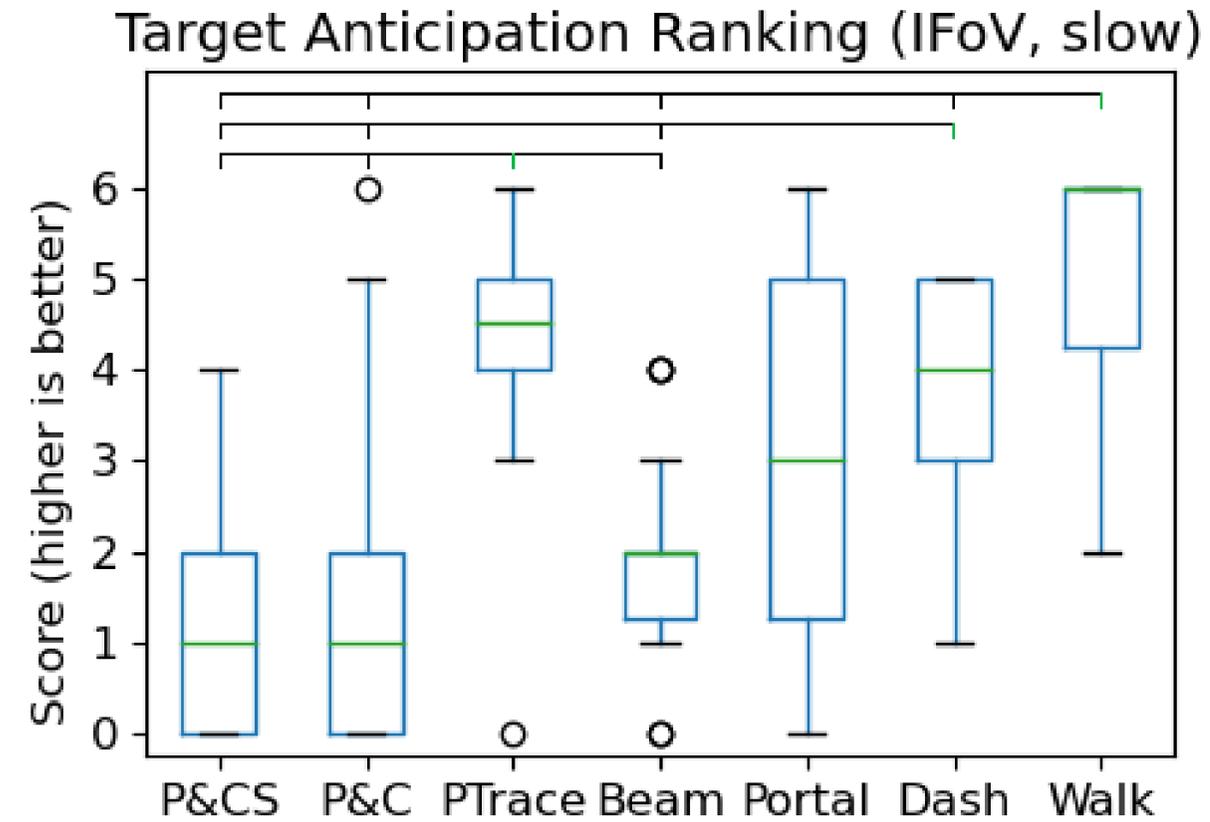

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

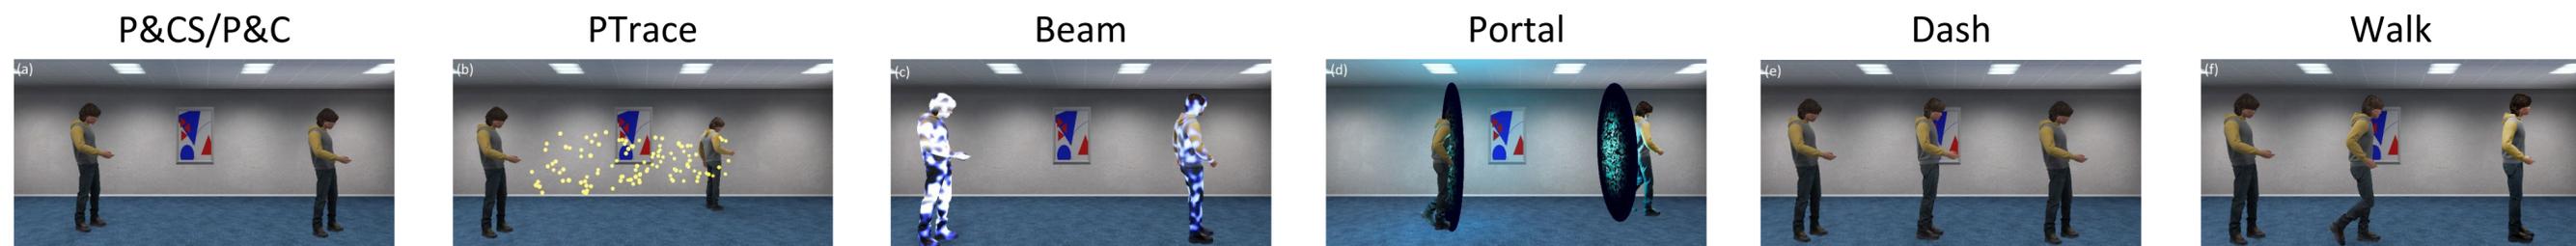

Continuous visualizations have highest spatial awareness, backed by tracking results

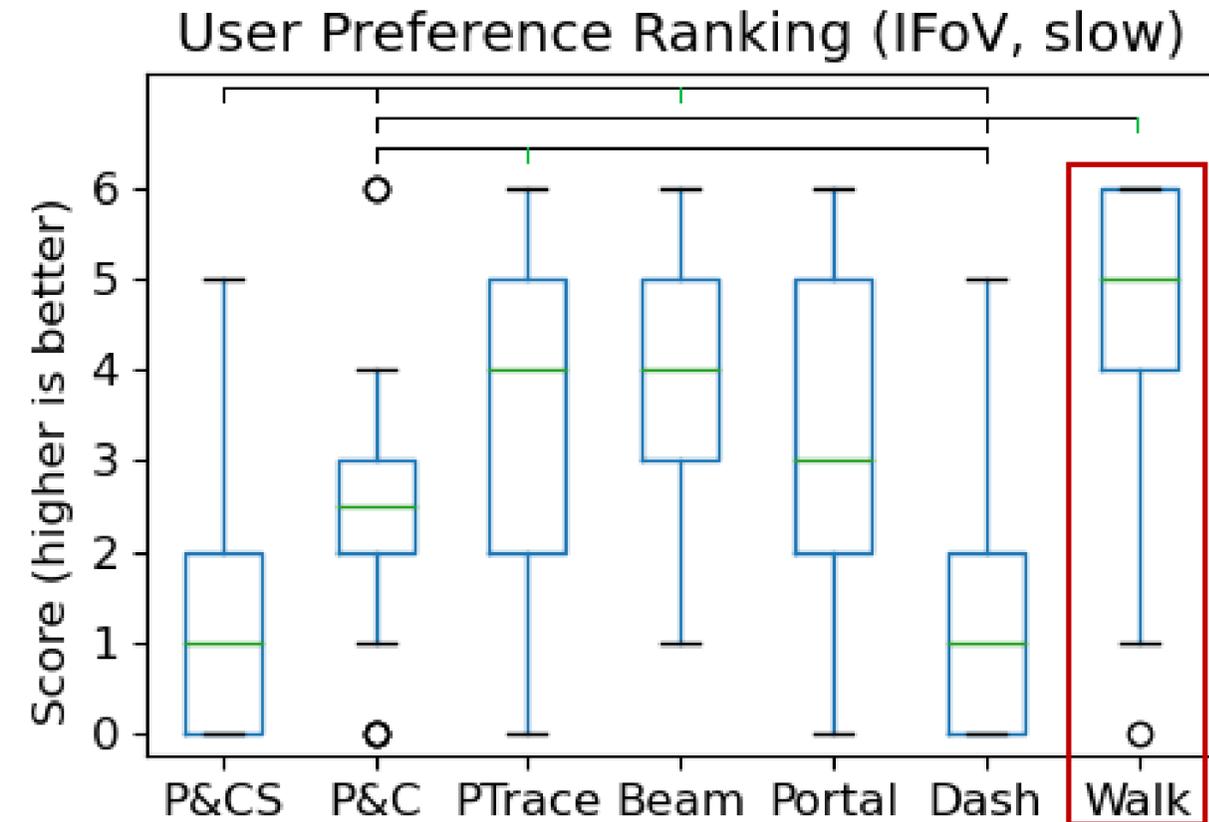

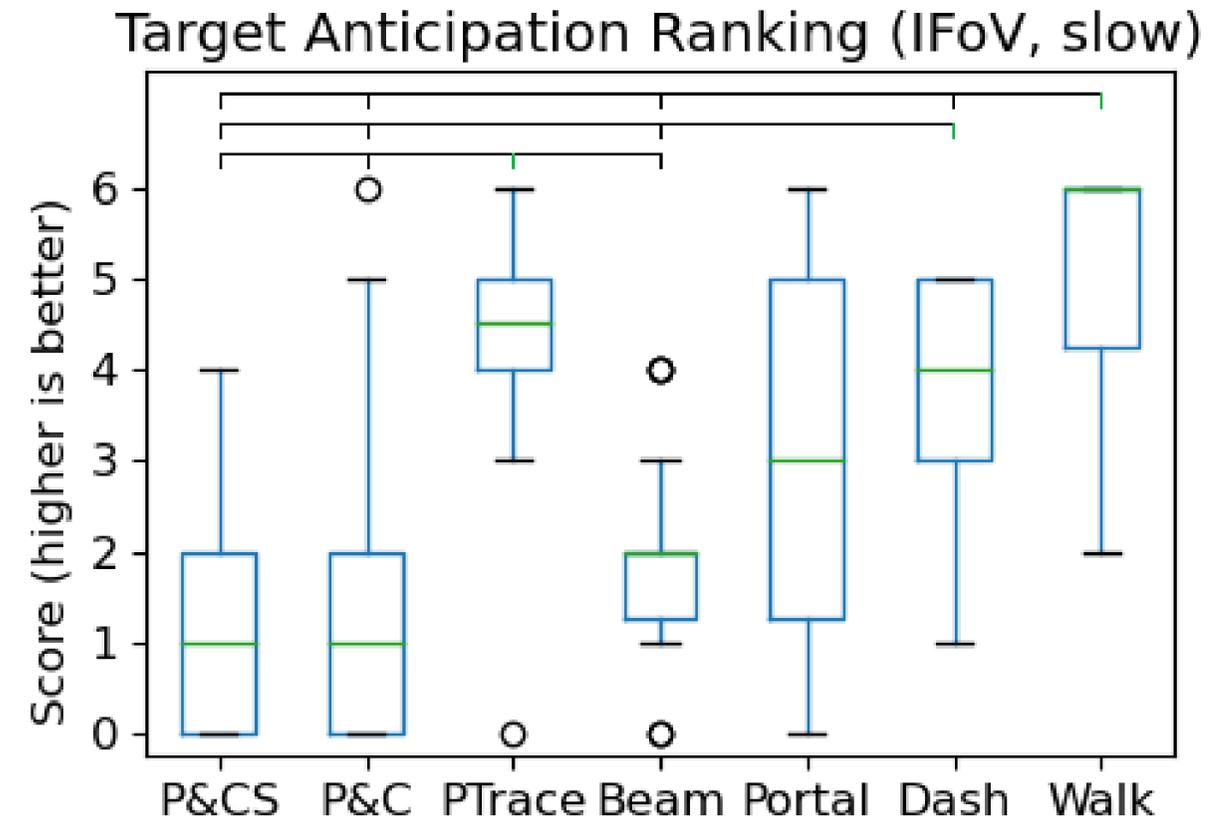

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

Continuous visualizations have highest spatial awareness, backed by tracking results

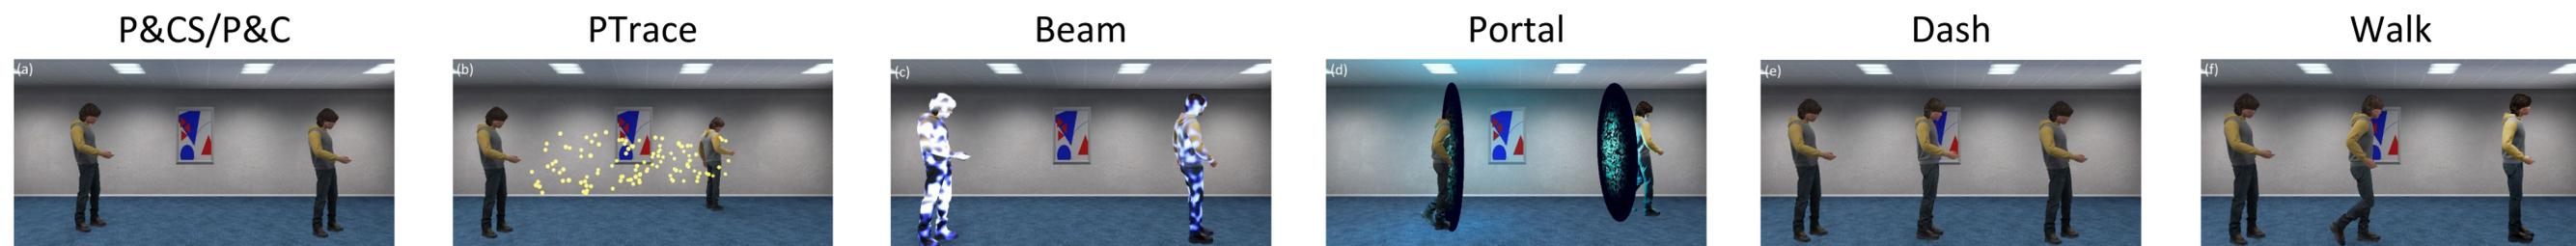

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

Continuous visualizations have highest spatial awareness, backed by tracking results

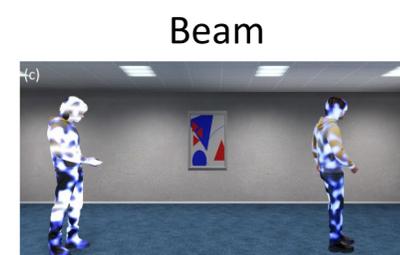

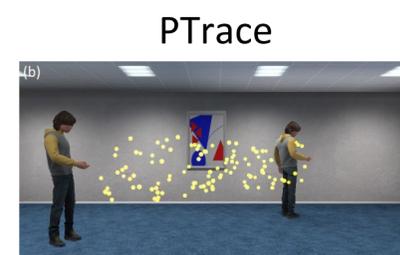

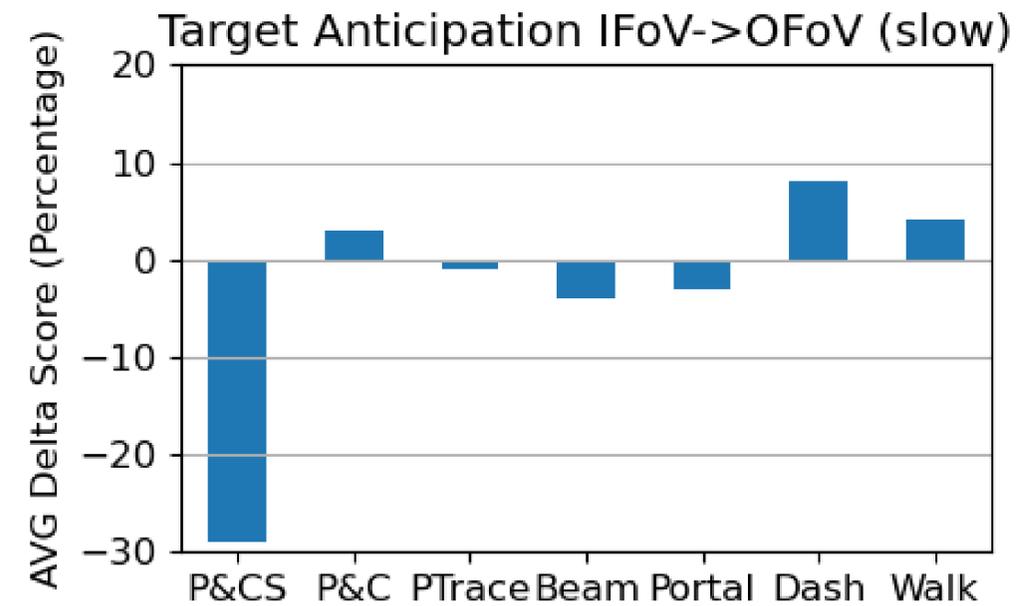

Teleport/dash is unpopular, walking is preferred

# Results & Discussion

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

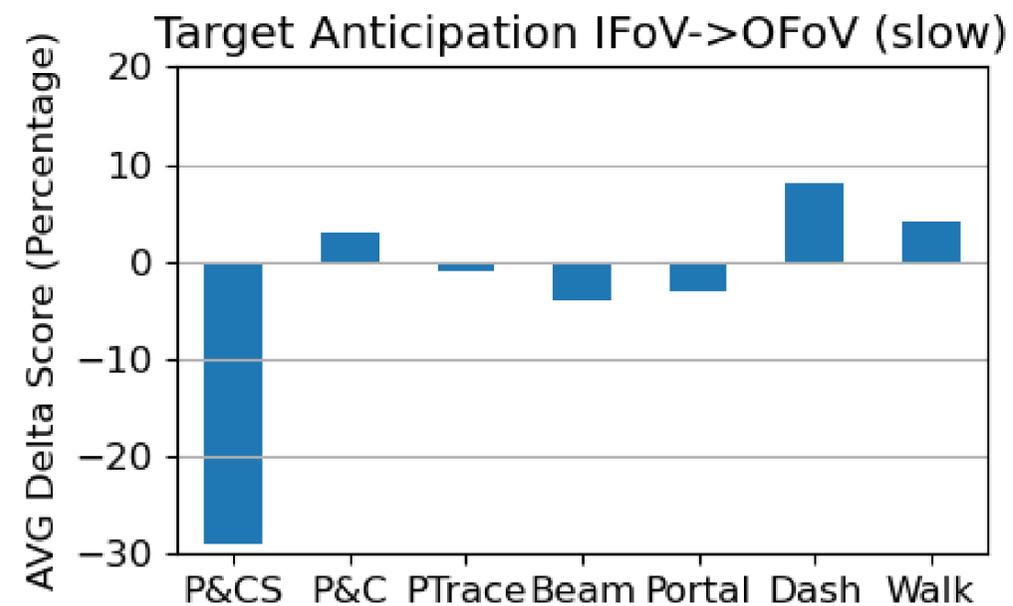

## In FoV vs. Out of FoV

# Results & Discussion

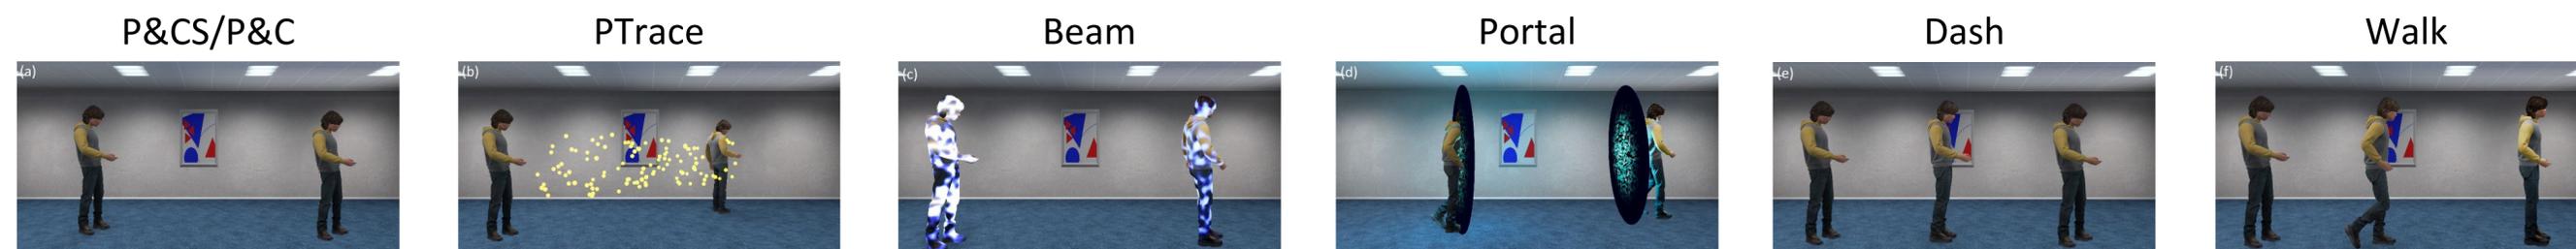

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

## In FoV vs. Out of FoV

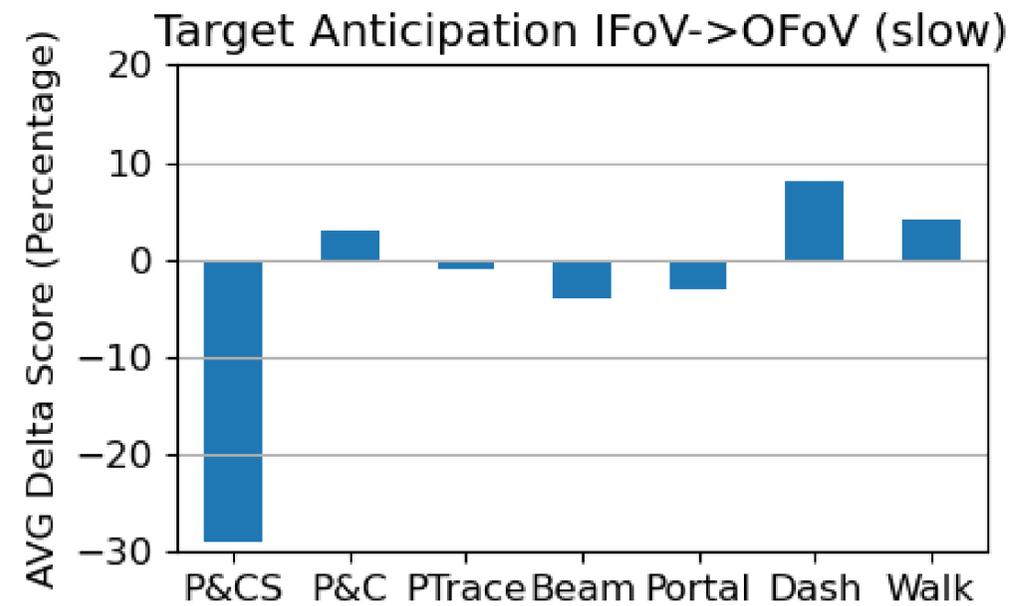

No big differences

Continous visualizations slight advantage

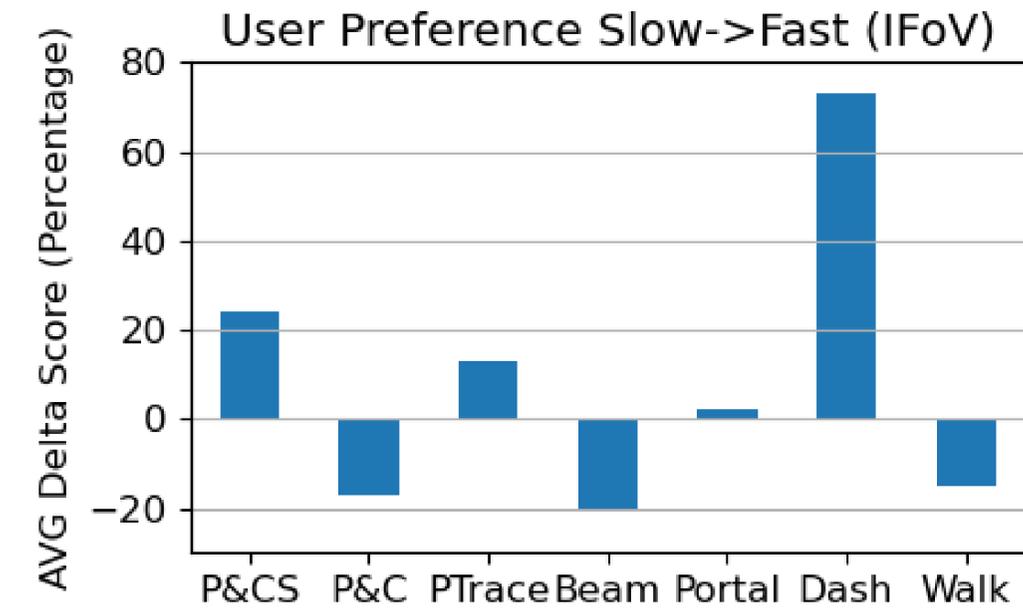

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

## In FoV vs. Out of FoV

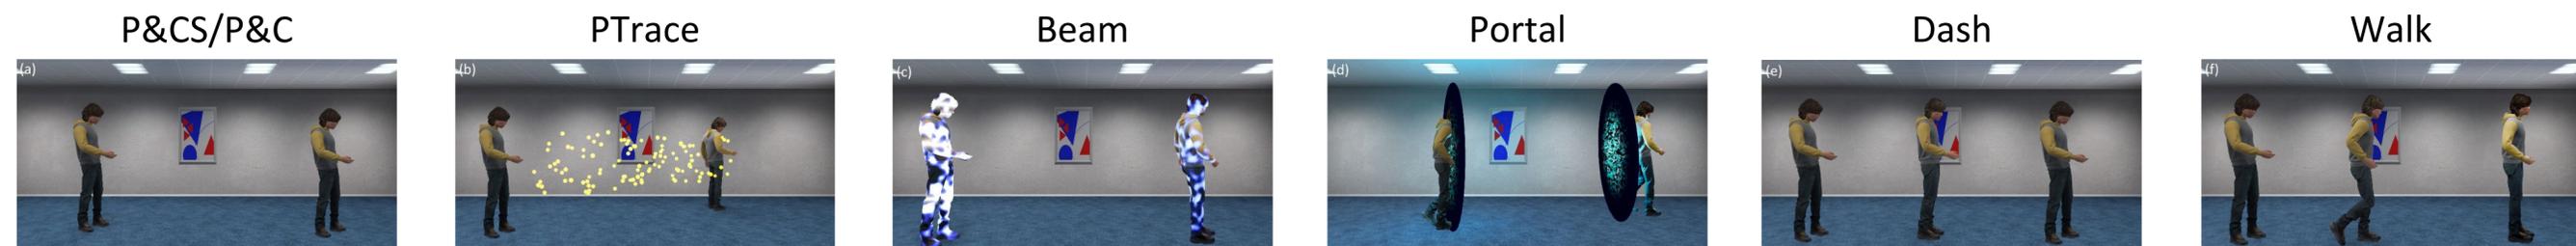

## Slow vs. fast

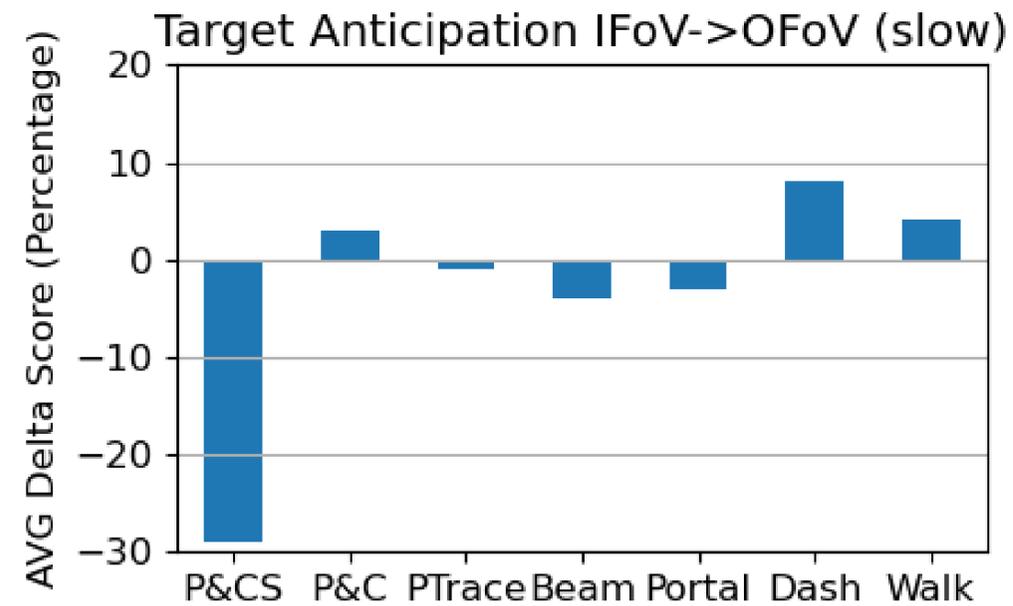

No big differences

Continous visualizations slight advantage

- 7-level repeated measure ANOVA/Friedman
- Pairwise dependent samples t-tests/Wilcoxon signed-rank test
- Similar 2-level tests for scenarios

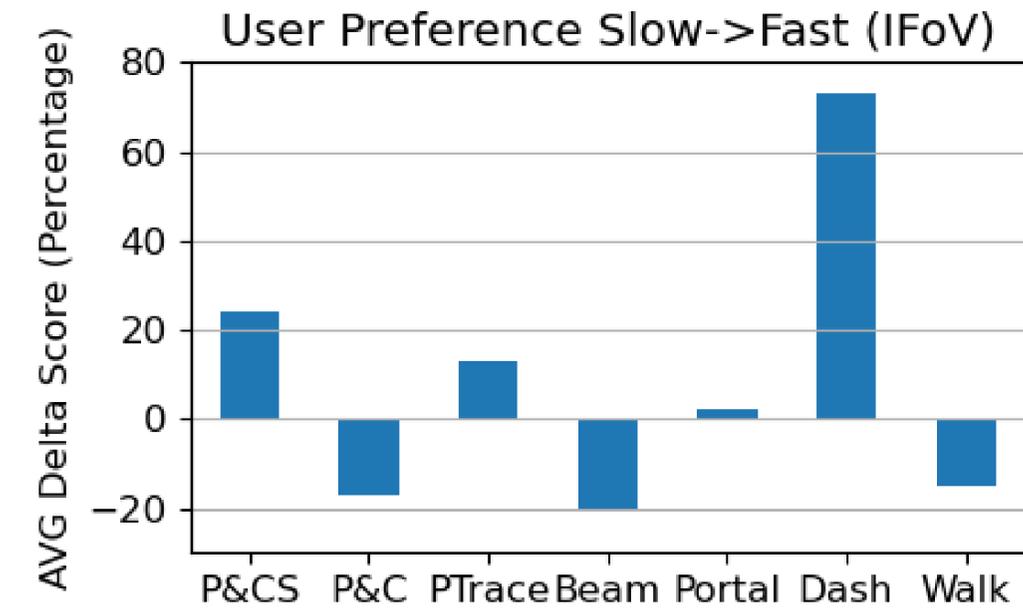

## In FoV vs. Out of FoV

No big differences

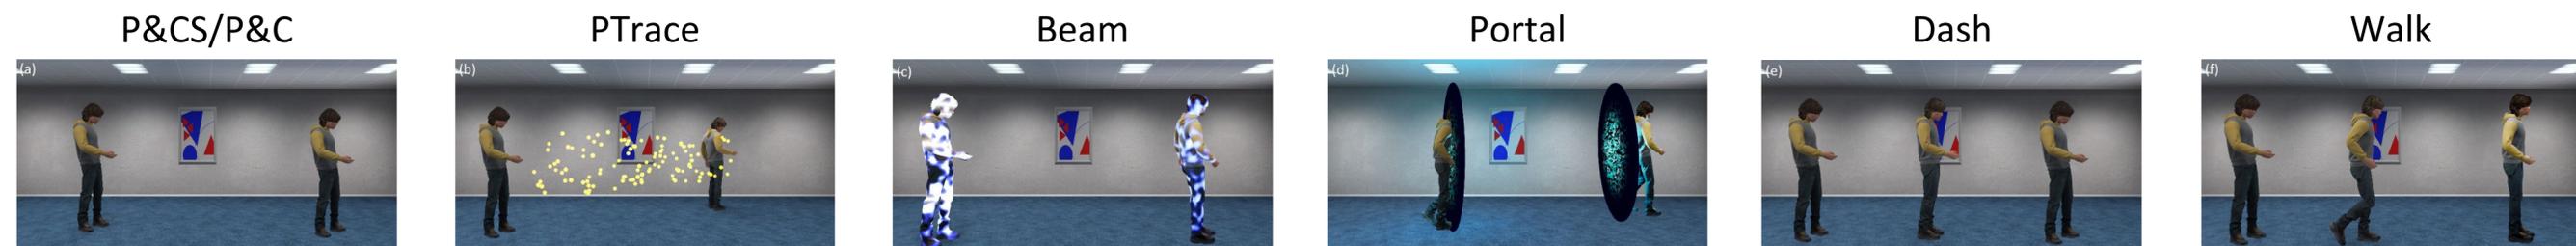

Continous visualizations slight advantage

## Slow vs. fast

Bigger differences

Fast: visualizations more similar

- Visualizations help even in simple scenarios
  - Use them

- Visualizations help even in simple scenarios
  - Use them
- Benefits decrease with speed
  - Visualizations most important for longer teleport processes

- Visualizations help even in simple scenarios
  - Use them
- Benefits decrease with speed
  - Visualizations most important for longer teleport processes
- Continuous visualizations tend to perform better (spatial awareness)
  - General recommendation

- Visualizations help even in simple scenarios
  - Use them
- Benefits decrease with speed
  - Visualizations most important for longer teleport processes
- Continuous visualizations tend to perform better (spatial awareness)
  - General recommendation
- Walking animation performed best overall
  - Recommended visualization (at reasonable speeds)

- Visualizations help even in simple scenarios
  - Use them
- Benefits decrease with speed
  - Visualizations most important for longer teleport processes
- Continuous visualizations tend to perform better (spatial awareness)
  - General recommendation
- Walking animation performed best overall
  - Recommended visualization (at reasonable speeds)
- Particle trace best for faster speeds
  - Alternative recommendation

# Conclusion

- Investigated visualization of teleportation to observers in VR

- Investigated visualization of teleportation to observers in VR
- Evaluated various measures and conditions/cases

- Investigated visualization of teleportation to observers in VR
- Evaluated various measures and conditions/cases
- Provided valuable insights and guidelines

- Investigated visualization of teleportation to observers in VR
- Evaluated various measures and conditions/cases
- Provided valuable insights and guidelines
- Visualizations can provide (significant) benefits
  - Confusion, spatial awareness, presence, preference

# Conclusion

- Investigated visualization of teleportation to observers in VR
- Evaluated various measures and conditions/cases
- Provided valuable insights and guidelines
- Visualizations can provide (significant) benefits
  - Confusion, spatial awareness, presence, preference
- Visualizations vary in performance
  - Walking animation and particle trace were best

# Future Work

# Future Work
