

# TemPCC: Completing Temporal Occlusions in Large Dynamic Point Clouds Captured by Multiple RGB-D Cameras

Andre Mühlenbrock, Rene Weller, Gabriel Zachmann

Computer Graphics and Virtual Reality Lab (CGVR)

University of Bremen, Germany

Dynamic 3D scene reconstruction:

- Visual applications (e.g. telepresence)
- Depth based-occlusion tests

Challenge:

- Temporal occlusions, even with multiple RGB-D cameras.

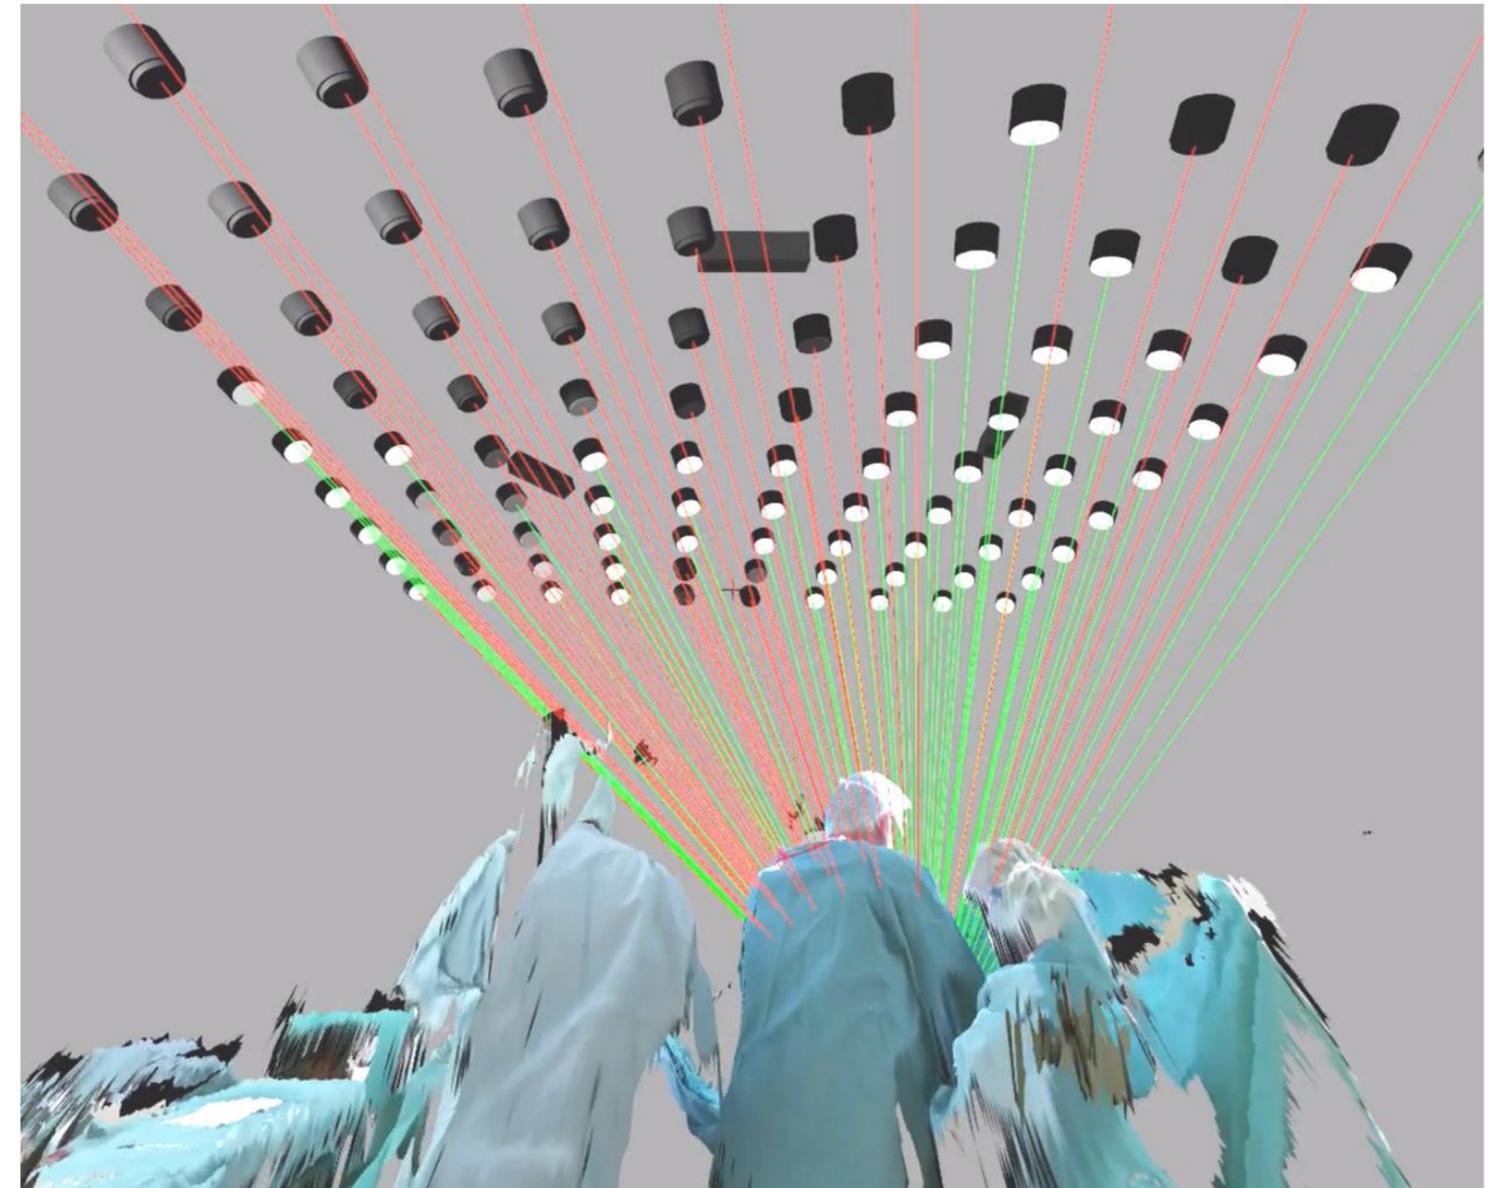

CWIPC-SXR Dataset, 3 Cameras, MMSys'21 [1]

Dynamic 3D scene reconstruction:

- Visual applications (e.g. telepresence)
- Depth based-occlusion tests

Challenge:

- Temporal occlusions, even with multiple RGB-D cameras.

## Point Cloud Completion

- Focuses mainly on single static objects
  - Completion by learning geometry
  - Approx. 1k – 20k points
- Currently not suited for entire, dynamic or unknown scenes

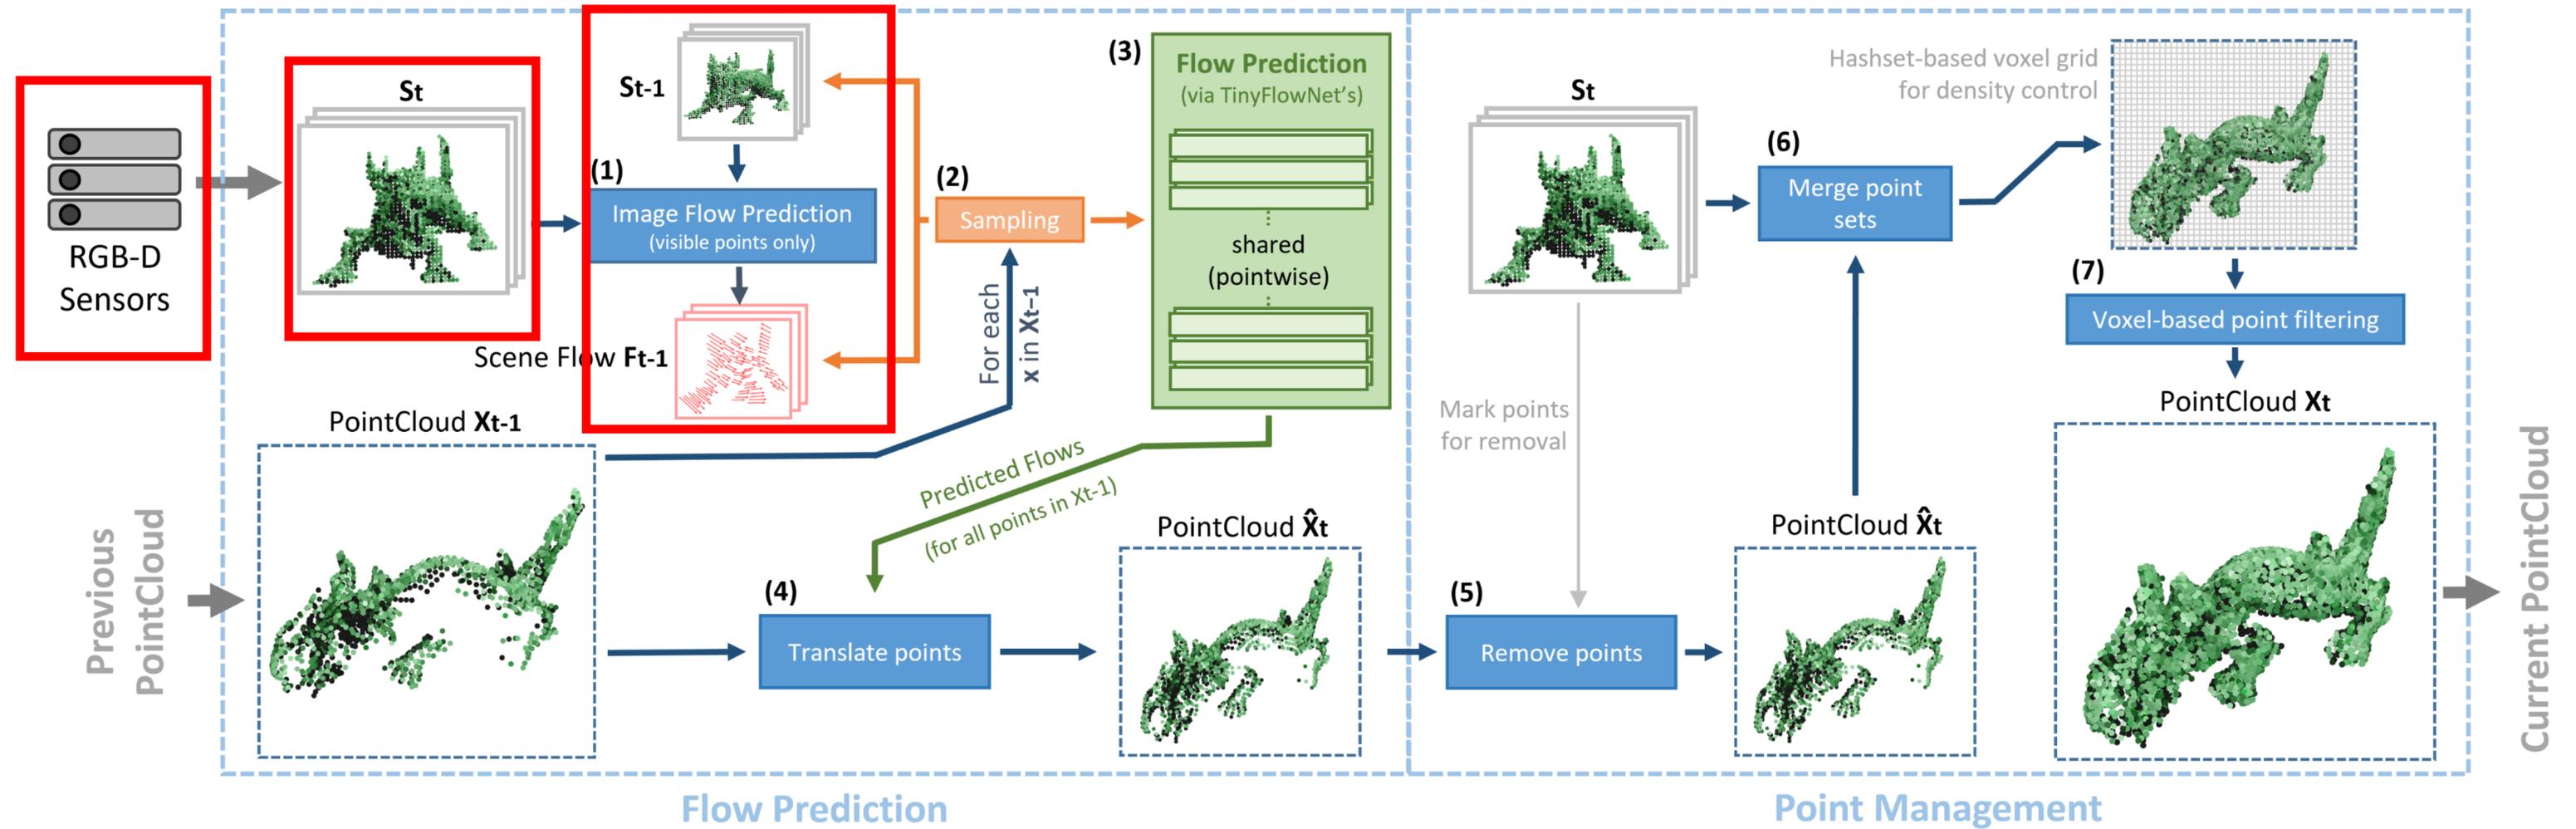

ODGNet, AAAI 2024 [5]

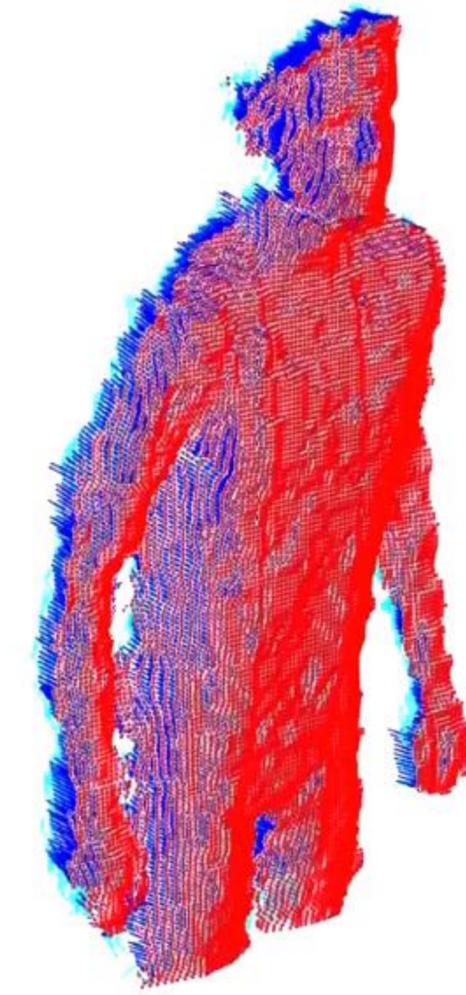

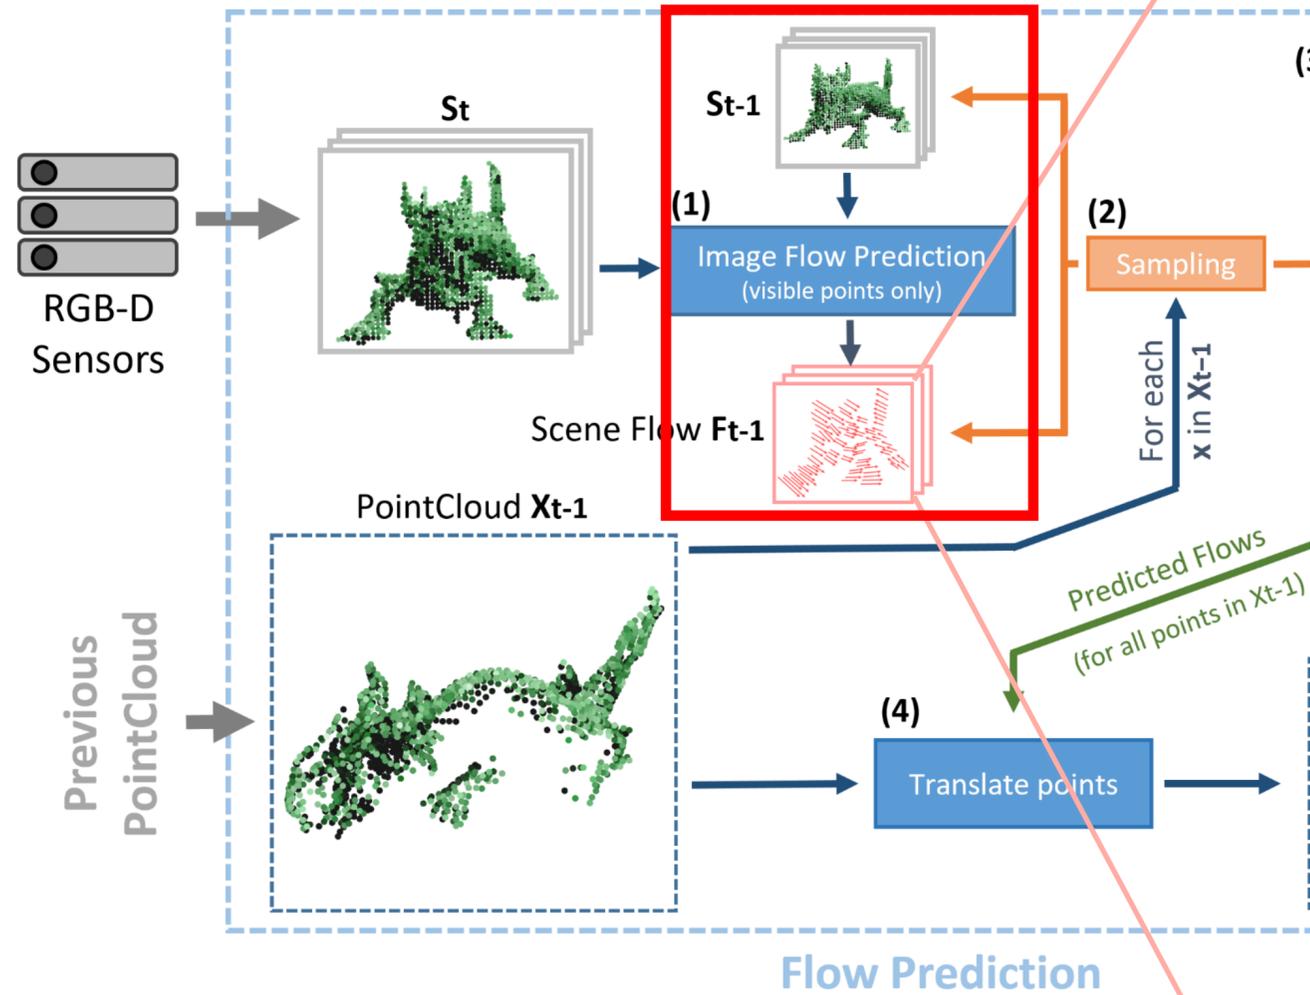

Temporal point cloud completion by **preservation and motion prediction** of **occluded points**

- No canonical model reconstructed
- Point-wise processing
  - Scales to arbitrary point sizes
  - Linear complexity  $O(n)$ , with  $n = \#points$

# Method: TemPCC

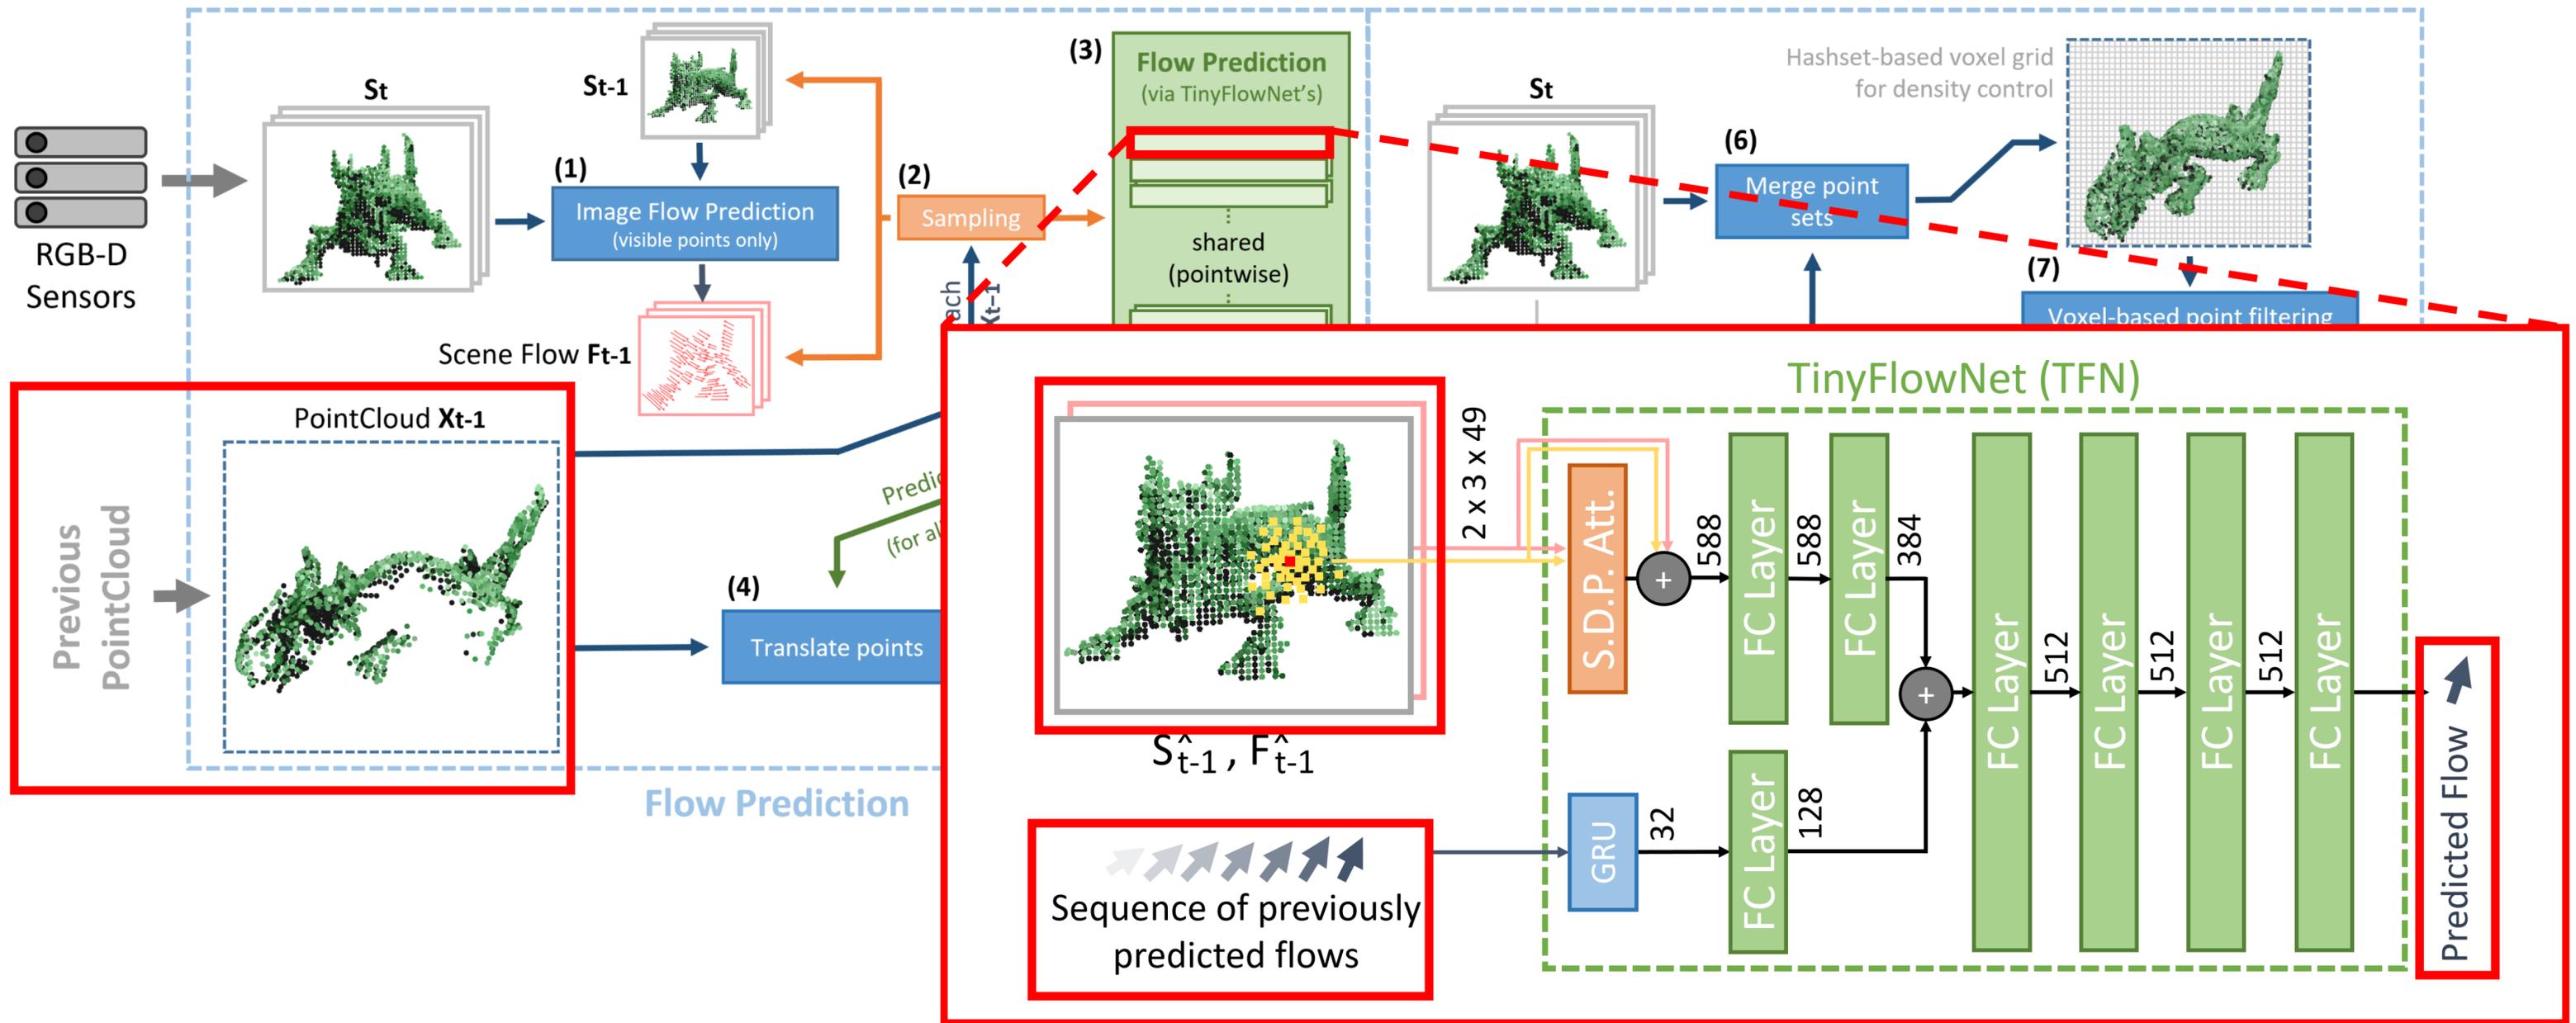

# U Method: TemPCC

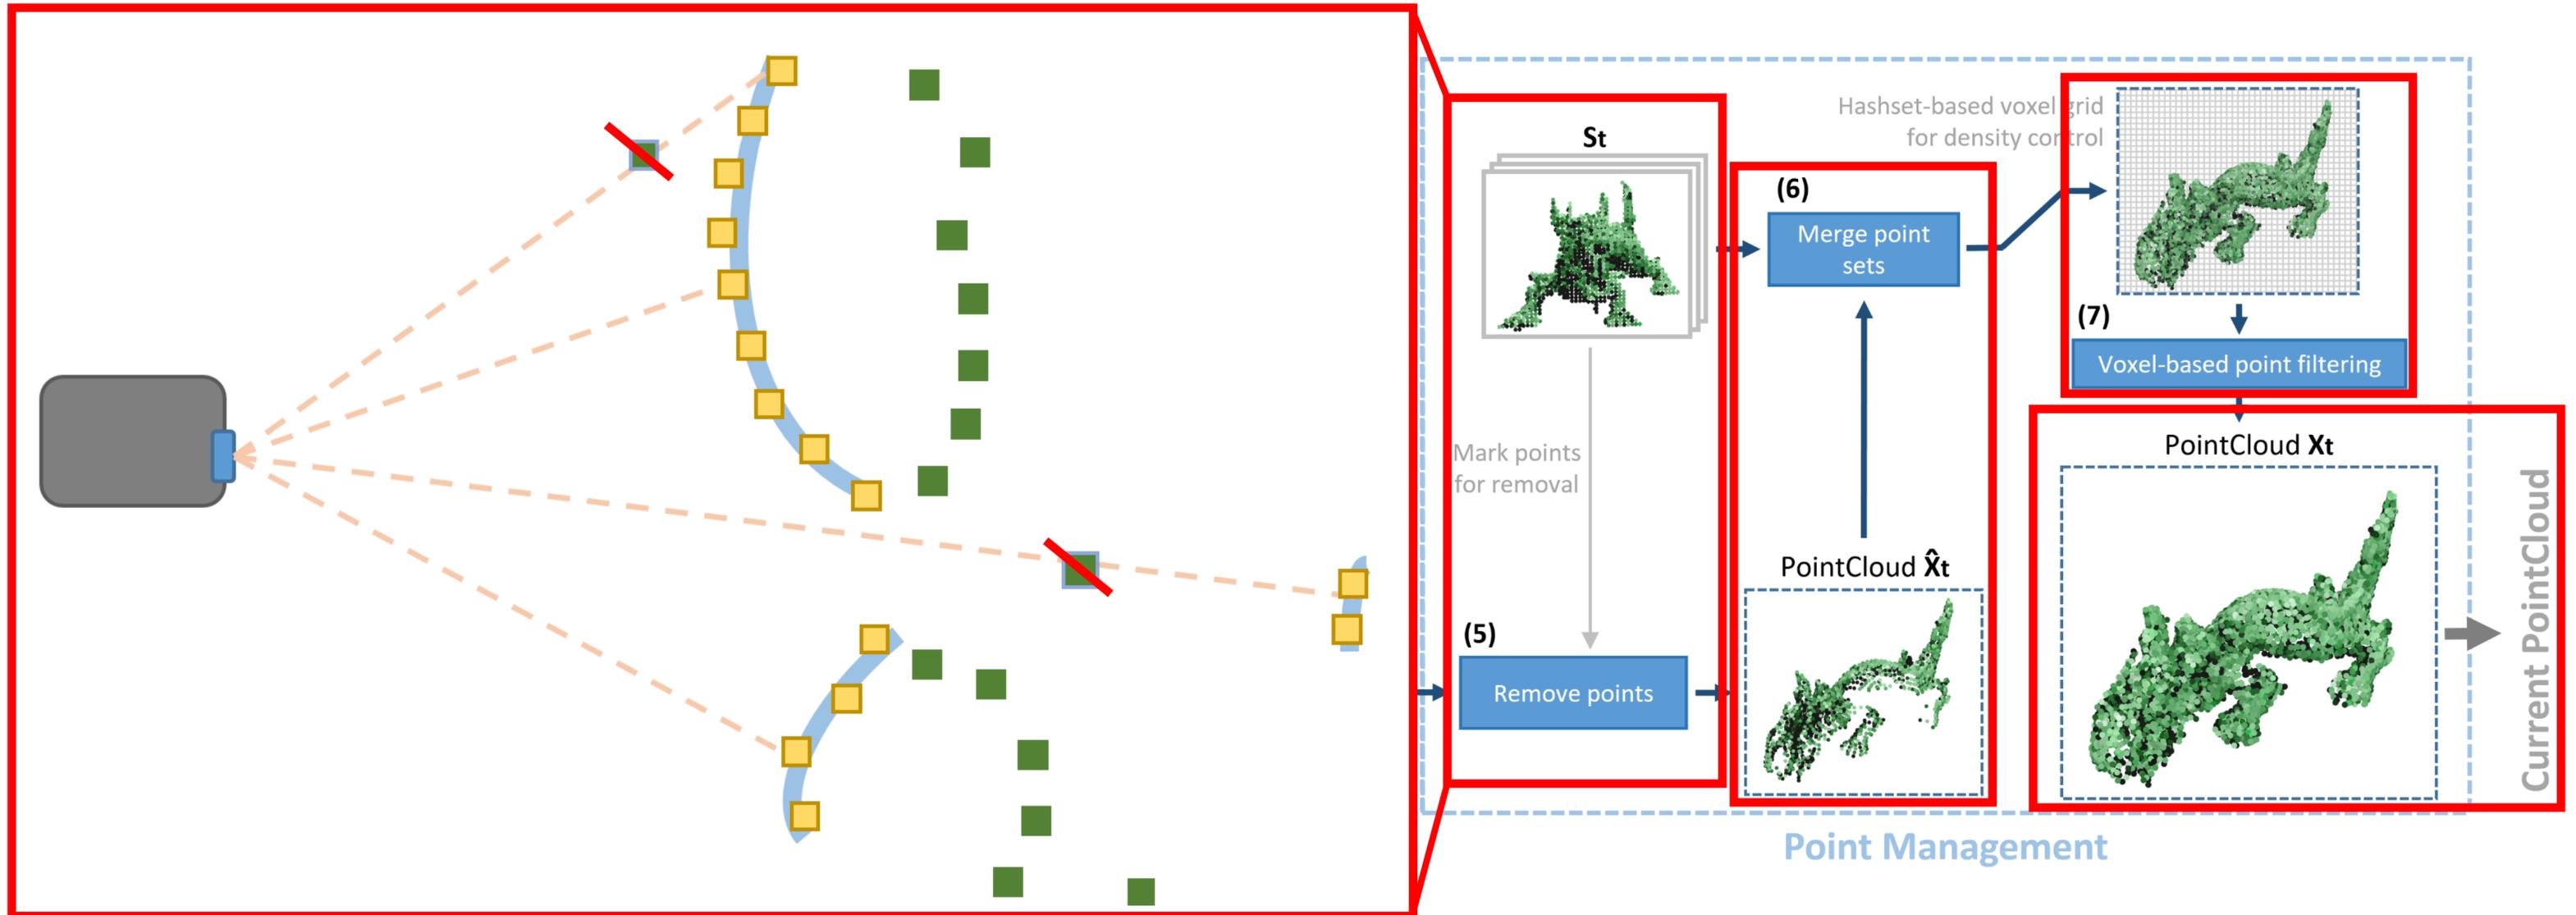

● Initial frame    — Motion field    ● Final frame

PDFlow, ICRA 2015 [6]

# Method: TemPCC

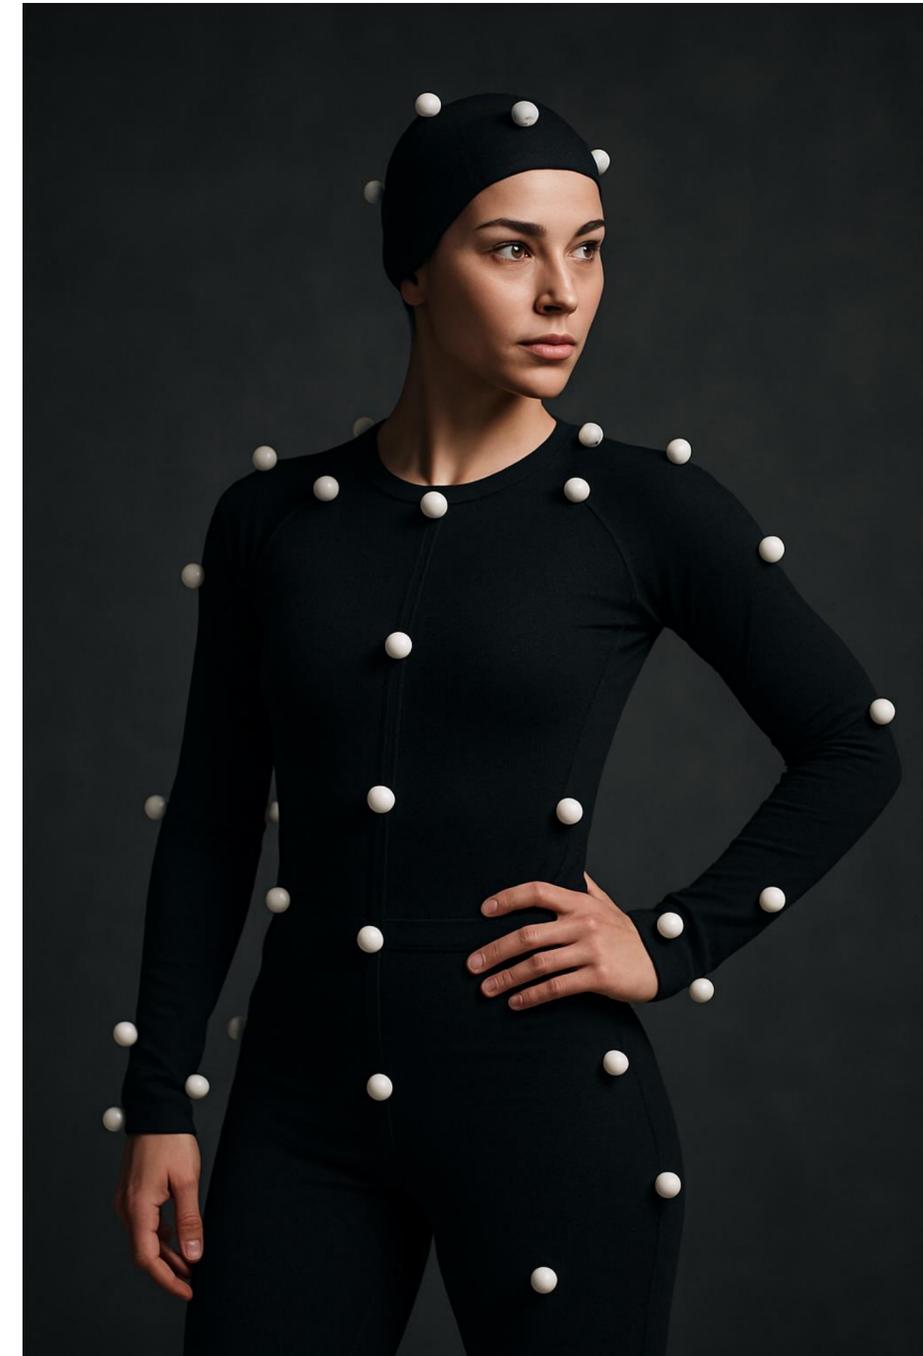

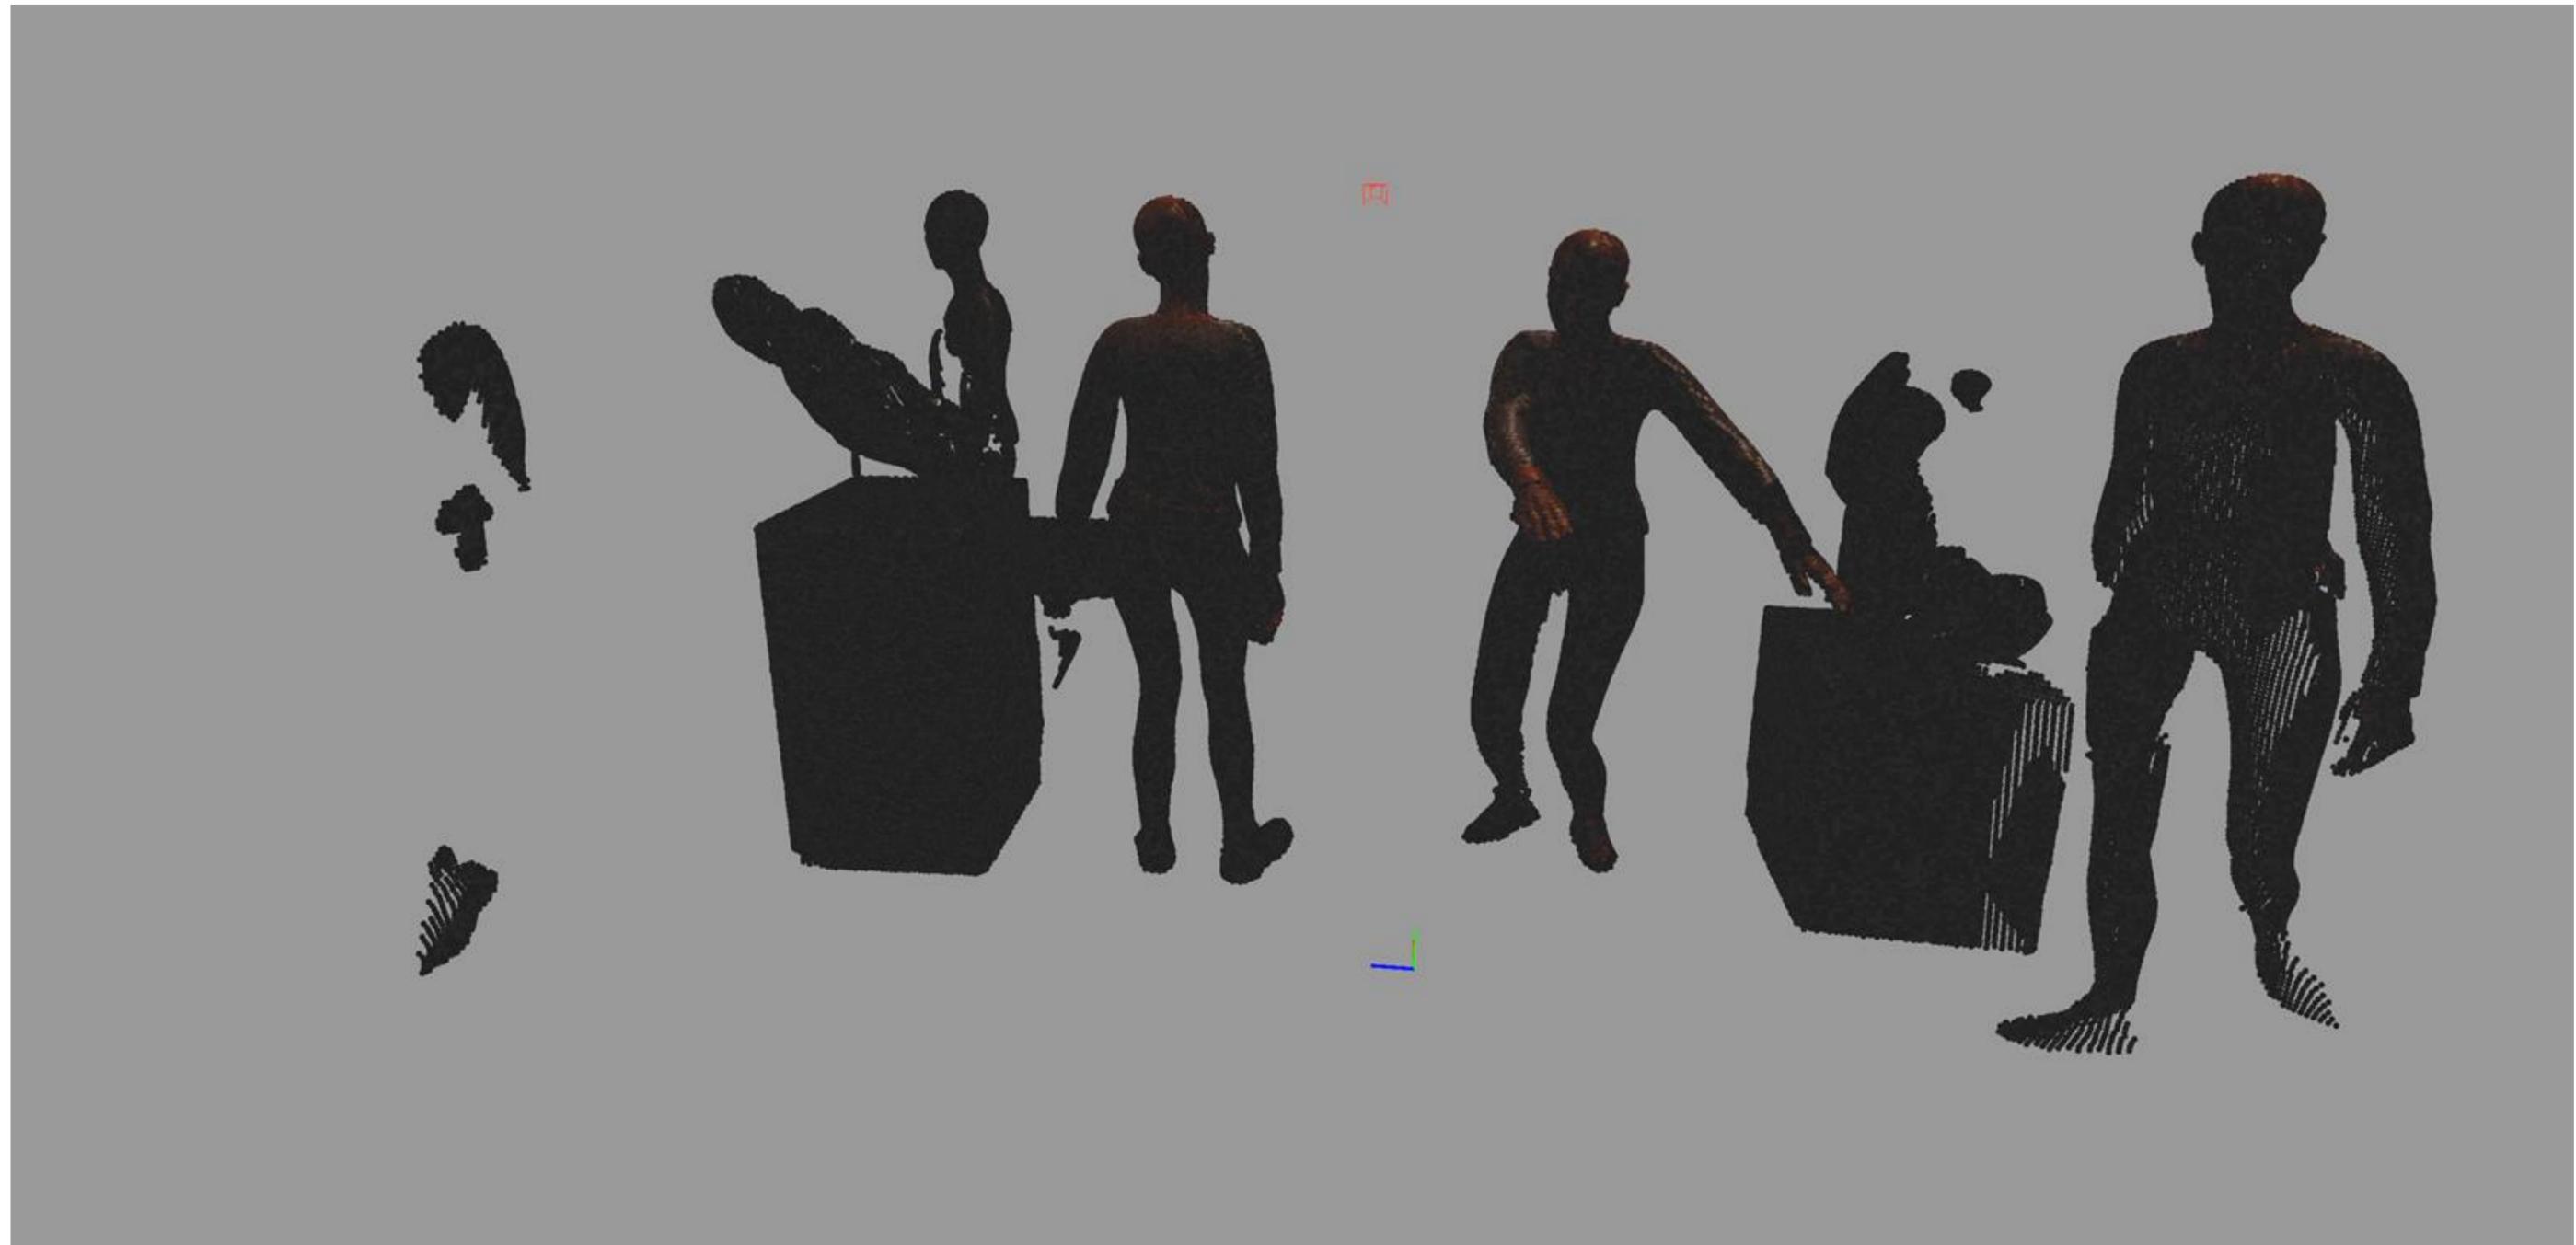

# U Method: TemPCC

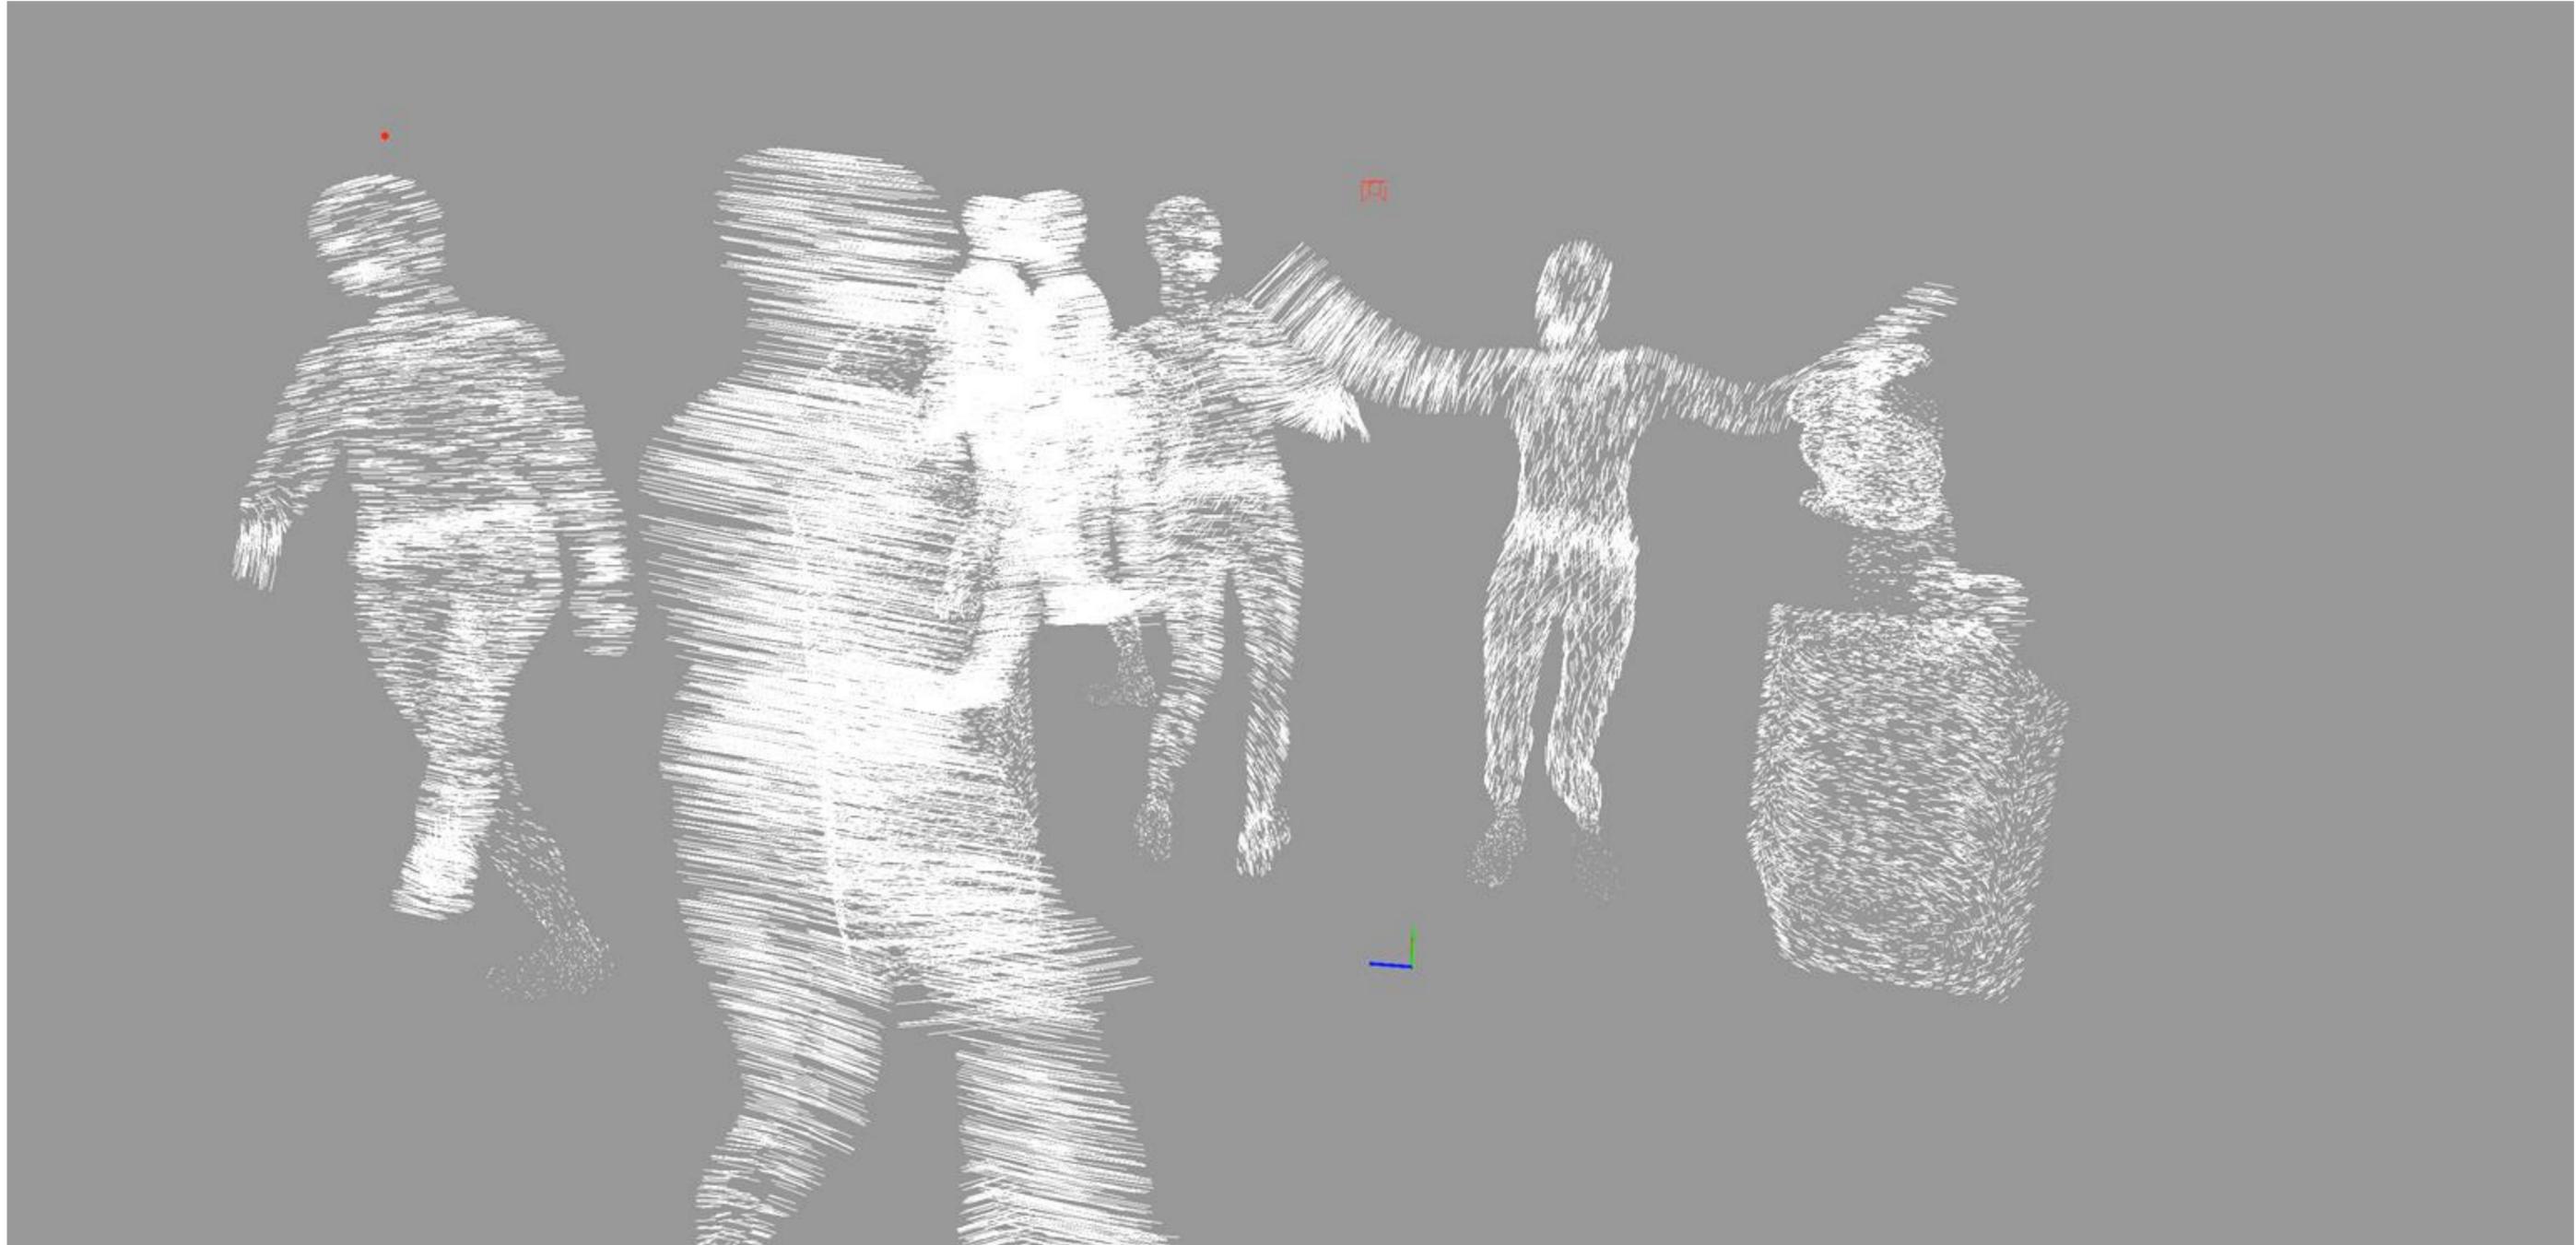

# U Training: Challenge

- Training the TinyFlowNet (TFN) requires ground truth motion information of occluded points
  - Hard to obtain in huge amounts for real world data.

## Limitations

- For visual reconstruction still quite noisy
- Real-time (30fps) only up to 30.000 points

## Future Work

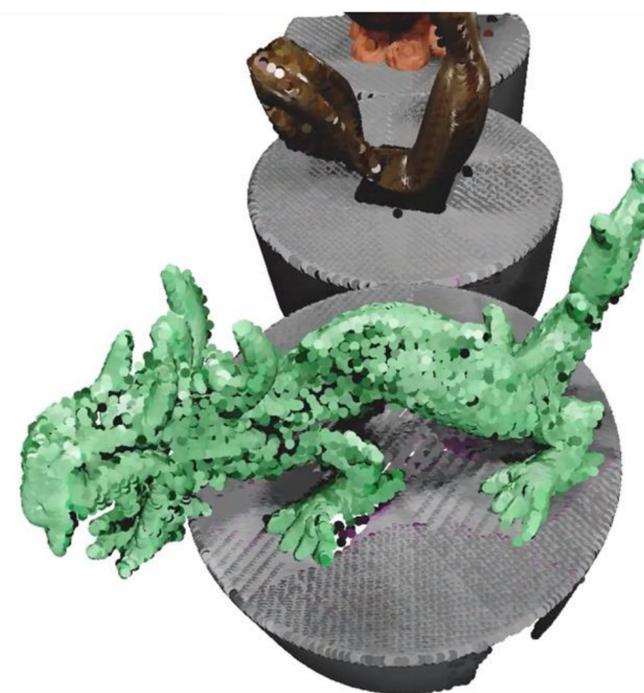

- Using color and connectivity information in TinyFlowNet
- Custom neural network implementation (instead of LibTorch)
- Larger training set

- Novel method for temporal point cloud completion
  - GPU-Pipeline that manages a point set over time
  - **TinyFlowNet** that predicts motion of occluded points
  - Real-time for 100k (1 camera) or 30k (3 cameras)
  - Areas that are occluded for a short time are preserved well.
  
- Source code available: <https://github.com/muehlenb/TemPCC>

Thank you very much for your attention!
