

VR Controller

Cabling

- The cables need to be plugged in the computer on the side of the room.
- The required cables came with the VR equipment.
- Beware not to connect the HDMI cable with the motherboard, but with the graphics card.
- The second cable was not connected to anything.
- The fourth cable is connecting the VR goggles with the power socket.
- If the cabling worked correctly the lamps on the goggles as well as on the controllers should turn from red to green.

Here is a photo on where to plug the cables in the computer:

Try controlling in VR

- Start a new Unreal Engine VR project.
- File -> Open Levels -> Virtual Reality BP -> Motion Controller Map.
